Contents

Foreword 9

1 **Introduction** 13
1.1 The Philosophy of the Notion “Equivalent-to-New” (ETN) 15
1.2 Terms and Definitions 20
1.3 Technical Criteria for Decision Making 22
1.4 Economical Criteria for Decision Making 23
1.5 IEC 62309 as the Reference Standard of this Book 23
1.6 Relevant Legal Standards 25

2 **Chances for Reuse** 29
2.1 Introductory Questions 29
2.1.1 Which Misleading Prejudices Exist in the Public and with Manufacturers? 29
2.1.2 Which Benefits can be Promised and Kept to which Extent? 32
2.1.3 Reusable QAGAN Components for Production and as Spare Parts 35
2.1.4 Clarification of the Scope 36
2.1.5 Some “Secrets” of Reuse 38
2.1.6 Which Products Fit Multiple Times as QAGAN, and at which Age? 39
2.1.7 Testability Simplified 41
2.1.8 Potential Markets for Reuse 43
2.1.9 The Market of Spare Parts with QAGAN Components 45
2.1.10 Potential Residual Values 46
2.1.11 Environmental Benefits 48
2.2 How to Select Reusable Components 53
2.2.1 Which Components are Suitable for Reuse? 53
2.2.2 Analysis, Marketing 54
2.2.3 Requirements for Environmental Information about Components 58
2.3 Examples 60
2.4 QAGAN Aspects 64
2.4.1 New Definitions of Terms are Required 65
2.4.2 Experience 66
2.4.3 QAGAN Components defined by IEC 62309 for Multiple Lives 67
2.5 Examples for Considering Quality Aspects 68
2.5.1 Qualification Process and Detailed Information 68
2.5.2 Information and Documentation 71

2.5.3 Design Requirements for a New Product 73
2.5.4 Planning for Several Product Generations 73
2.6 Reusability Strategies for Production and Sales 76
2.7 An Organization Frame to Include Reusability into the Management System 79

3 Qualification of ETN Components – Examples and Case Studies .. 81
3.1 Notions and Figures Drawn from Reliability Theory 81
3.2 Refurbishment of Components 84
3.3 A Complex Product Family with Components Subdued to Wear: Copiers 85
3.4 Case Study: Print Transformer 87

4 "Design for Recycling" – How to Proceed? 93
4.1 General Remarks about the Methodology 93
4.2 Accommodation to Pre-defined Conditions 96
4.3 Analysis of Potential Recovery in the Existing Market 102
4.4 Analysis of Potential Applications 104
4.5 Cost/Benefit Analysis 105
4.6 Analysis of Forerunner Products/Products of Competitors 105
4.7 Results and Consequences 105

5 Strategies, Concepts and Objectives 109
5.1 Strategies for Realization a Redesign 109
5.2 Individual Concepts 114
5.3 Targets and Evaluation of Reusability 118
5.4 Relationship to the Overall Strategy 121

6 Reuse of embedded Software in New Products with QAGAN Components 127
6.1 Dependability, Energy Consumption, and Ecology Aspects 128
6.2 Liability and Documentation (Additional to the Hardware Documentation) 129

7 Summary and Outlook 131

8 References 135

Appendix 1 Practical Rules for Recycling-oriented Product Design 143

Appendix 2 Analysis of Potential Conflicts or Barriers Using Optimized Recycling Characteristics..... 146

Appendix 3 Abbreviations, List of Related Institutes and Professional Associations..... 147

Appendix 4 Checklists for the Reuse of Software to Avoid Environmental Damages 149

Appendix 5 Checklist for Qualification of Components..... 152

Subject Index 155
