Grid Planning and Energy Management – Power Quality, Power Distribution System, Storage

Chair: Dr. Lars-Peter Lauen

1. **Parameters of Rapid Voltage Changes and Their Effects on Power Quality** 7
Till Garn, Cornelius Biedermann and Bernd Engel
2. **Transfer of automated grid planning methods from power to gas distribution grids**..... 13
Christoph Klaassen and Tanja Kneiske
3. **Harmonic Fingerprint Measurement for Characterization of LED Street Lighting**..... 18
Farhad Safargholi
4. **Analysis of user behavior for modeling an electric vehicle loading profile generator**..... 23
Fynn Liegmann, Alen Murtovi, Michael Kelker & Jens Haubrock
5. **Hierarchical Online-Optimization for the Control of Flexible Loads and Generators in Distribution Grids** 28
Benjamin Fritz, Hanko Ipach and Christian Becker

Grid Operation I – Operation, Converter and Control

Chair: Dr.-Ing. David Sebastian Stock

6. **Potentials of a cost-optimized application of regulated distribution transformers in urban low-voltage grid planning with a high share of charging infrastructure, heat pumps and photovoltaic systems** 34
Fabian Göbelsmann, Patrick Wintzek, Shawki Ali, Markus Zdrallek, Julian Monscheidt, Ben Gemsjäger and Adam Slupinski
7. **Operational Strategies for Battery Energy Storage Systems for Corrective Congestion Management**..... 40
Julian Richter and Johannes Porst
8. **Design of LCL Filter for DC Converter by Using Analytical Equations** 46
Jianfeng Wei, Uwe Rädcl and Jürgen Petzoldt
9. **Optimization of market- and grid-related measures in transmission system congestion management with an AC power flow formulation**..... 52
Moritz Blunck, Yannic Harms and Denis Mende
10. **From a distributing to a generating network: Assessing PV hosting capacity under uncertainty in distribution grids** 58
Steffen Kortmann, Xuejiao Han, Marius Schwarz and Gabriela Hug

Grid Operation II – Restoration, Short-circuit/Fault and Protection

Chair: Dr. Sebastian Wende-von Berg

11. Application of graph theory for automatic restoration distribution networks.....	64
Artem Kashtanov, Martin Wolter and Eric Glende	
12. Higher harmonics influence on stability of arcing single phase to earth faults in 6-10 kV networks with arc-suppression coil.....	69
Yuri D. Kutumov, Tatyana Yu. Shadrilkova & Vladimir A. Shuin	
13. Calculation of Damping Coil Parameters to Limit the Short Circuit Current in Rectifier Stations.....	75
Sohel Ahmad	
14. Investigating and Mitigating Harmonic Load in Island Operation Mode.....	80
Kevin Karp, Felix Heider, Marc Florian Meyer & Detlef Schulz	
15. Adaptive and Automated Protection Settings for Over-Current Relays in Radial Grid Configuration.....	86
Pawel Lytaev, Gourab Banerjee and Jonas Haack	

High Voltage Engineering & Cross-Cutting – Modelling and Simulation

Chair: M. Sc. Maryam Majidi

16. Towards Low-Carbon Multi-Energy Systems: The Hessian Energy Transition.....	92
Sizhang Feng, Leon Floer, Felix Görzel, Dennis Michael Jöckel, Juli Barbosa and Florian Steinke	
17. Research on Power System Network Equivalent with Different Methods.....	98
Jianfeng Wei, Hui Cai, Teng Jiang & Dirk Westermann	
18. State-based modeling of controllable power system components via stochastic activity networks.....	104
Alicia Schneiders and Jonas Haack	
19. Approximation of nose curves with conic sections.....	110
Normen Lüttge and Martin Wolter	
20. Implementation of a Line Search Algorithm to determine the optimal Tradeoff between Grid Operation and Grid Expansion in the German Transmission Grid.....	115
Nicolai Damm, Yannic Harms, David Sebastian Stock and Martin Braun
