

Contents

1 Paper Session I: Power Converter and Electrical Machine Control Strategies

Chairs: Tobias Erckrath, Bikash Sah

- 1.1 Use of Single Board Computers in Hardware-in-the-Loop Systems for Education in Renewable Energy Systems 8
Derk Gonschor, Philipp Schmitz, Marco Jung
- 1.2 Controller Parameterization for Grid-connected Power Converters through Reinforcement Learning 13
Jiahao Bo, Ran Wie, Hui Cai, Steffen Schlegel, Dirk Westermann
- 1.3 Asymmetric and Confined Operation of a Generic Virtual Synchronous Machine 19
Johannes Heid, Walter Schitteck
- 1.4 Investigation of Estimation Algorithms as an Alternative to Distance Sensors in Wind Turbines 25
Ping He, Jonas Steffen
- 1.5 Comparative Evaluation of Control Strategies for Shunt Active Power Filters in Industrial Power Systems 31
Rodrigo Zenon Guzman Iturra, Peter Thiemann
- 1.6 Grid-forming Fuel Cell System for a Multi-Energy-Micro-Grid in Island Operation 37
Edgar Diego Gomez Ancas, Johannes Blanz, Detlef Schulz

2 Paper Session II: Real-time Simulation, Testing and Protecting

Chairs: Gourab Banerjee, Dr. Marco Pau

- 2.1 Current Limiting and Virtual Synchronous Machines on Unbalanced Faults Considering Grid Protection 43
Carlo Liebermann, Lasse Gnärig, Robin Weiß, Andreas Hoffmann, Yinan Zhang, Ricardo Herrmann, Peter Schegner, Steffen Bernet
- 2.2 A Generic Data Generation Framework for Short Circuit Detection Training of Neural Networks 49
Minxiao Wang, Georg Kordowich, Johann Jaeger
- 2.3 Simulation of Cross-sectoral Energy System on a Real-time Computer 55
Tom Duphorn, Elisabeth Feldhoff, Steffen Schlegel, Dirk Westermann
- 2.4 A Python Test Environment for Multi-Agent Systems in a Large Electrical Distribution Grid Model 61
Jonathan Loebel, David Riebesel, Gert Mehlmann
- 2.5 Conformity Investigation of Type 3 Doubly Fed Induction Generator Wind Power Plant Regarding Grid Code Compliance Test 67
Darko Brankovic

2.6 Evaluation and Test of Distance Protection in Cellular Energy Systems by Power Hardware in the Loop Method	72
Manuel Galler, Lothar Fickert	
3 Paper Session III: Power Electronics Topologies, Components and Behaviours	
Chairs: Markus Woldt, Moritz Schmitz	
3.1 Design of a PV-Micro Inverter with Universal Three-Phase and Single-Phase Output Configurations	78
Lennart Hoffmann, Tobias Brinker, Tilo Teichert, Luca Zimmermann, Marie Hanemann, Tobias Manthey, Jens Friebe	
3.2 On the Modeling of Nonlinear Electrical Conductivity and Field Distribution of Mineral Oil under HVDC-Load	84
Deniz Targitay, Lisa Roth, Markus Zink, Maja Kobus	
3.3 Non-invasive Alternating and Direct Flux Sensor for Power Transformers	90
Alexander Fröhlich, Dennis Albert, Philipp Schachinger, Herwig Renner, Hans-Joachim Pöss, Robert Schürhuber	
3.4 Scalable Battery Cell Cascaded H-bridge Converter	95
Max Rothenburger, Hartmut Hillmer, Tobias Scholl, Gerold Schulze, Koenraad Muyliaert	
3.5 A Study on Behavioural Changes on High Voltage Capacitors in Power Electronics Applications	101
Pranav Balasundaran, Daniel Haake, Sebastian Sprunck	
4 Paper Session IV: Grid Operation and Control	
Chair: Andrea Schön	
4.1 Modelling the Influence of Virtual Inertia in Distribution Systems on Frequency Stability ...	106
Philipp Hund, Simon Stock, Davood Babazadeh, Christian Becker	
4.2 Analytical Threat Modeling for Power Systems	112
Eric Tönges, Inga Löser, Jonas Haack, Martin Braun	
4.3 Deep Neural Networks for Short-term Multivariate Solar Power Predictions from Various Meteorological Forecast Data	118
Benedikt Hönle, Henrik Sommer, Wolf-Michael Gnehr, Peter Bretschneider	
4.4 Influence of GIC Related Reactive Power Demand on the Austrian Transmission Grid	124
Philip Schachinger, Peter Wohlfart, Dennis Albert, Herwig Renner, Georg Achleitner	
4.5 Distinction Between "Destructive" and "Constructive" Harmonic Currents to the Voltage Quality	129
Kia Malekian Boroujeni, Farhad Safargholi, Kaveh Malekian	
4.6 EMT-Simulation of Grid-forming Converter with Voltage Angle Control	135
Nikolay Sanchenkov, Hassan Alhomsy, Dirk Westermann	
4.7 Time Series Data Splitting for Short-Term Load Forecasting	141
Magsud Hasanov, Martin Wolter, Eric Glende	

5 Paper Session V: Grid Planning

Chair: Dr. Marco Pau

5.1	Methods for Identifying Relevant Grid Areas for the Integration of Distribution Grid Automation Systems	147
	Patrick Sobbe, Sebastian Raczka, Bharathwajanprabu Ravisankar, Ulf Häger, Christian Rehtanz	
5.2	Comparison of Methods for Reducing the Complexity in Determination of Grid Reinforcement Demands	153
	Hongyu Jin, Haonan Wang, Denis Mende	
5.3	Open Electrical Grid Model for Regional Transmission Networks	159
	Jan Schmitt, Derk Gonschor, Alion Alushi	
5.4	Relevance of Unbalanced Loads in Low Voltage Grids in the Context of Emerging Electromobility	164
	Sebastian Elias, Gourab Banerjee, Hendrik Maschke	
5.5	Hydrogen Pipeline Network Design: An Optimization-based Planning Method Considering the Existing Natural Gas Network.	170
	Khalil Ben Safta, Jolando Marius Kisse	
5.6	Optimization of the Electricity Market Participation by a Waste Incineration CHP Plant with a Battery Energy Storage System	176
	David Achenbach, Johannes Lips, Hendrik Lens
