17.13 Interface Definitions for libgio-2.0

The interfaces defined on the following pages are included in libgio-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 17.11 shall behave as described in the referenced base document.

17.14 Interfaces for libatk-1.0

Table 17-101 defines the library name and shared object name for the libatk-1.0 library

Table 17-101 libatk-1.0 Definition

Library:	libatk-1.0
SONAME:	libatk-1.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[ATK 2.2.0] ATK 2.2.0 Reference Manual
[Gobject 2.32] Gobject 2.32 Reference Manual
[LSB] This Specification

17.14.1 GTK Accessibility Toolkit

17.14.1.1 Interfaces for GTK Accessibility Toolkit

An LSB conforming implementation shall provide the generic functions for GTK Accessibility Toolkit specified in Table 17-102, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-102 libatk-1.0 - GTK Accessibility Toolkit Function Interfaces

An LSB conforming implementation shall provide the generic deprecated functions for GTK Accessibility Toolkit specified in Table 17-103, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 17-103 libatk-1.0 - GTK Accessibility Toolkit Deprecated Function Interfaces

17.15 Data Definitions for libatk-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libatk-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.16 Interface Definitions for libatk-1.0

The interfaces defined on the following pages are included in libatk-1.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 17.14 shall behave as described in the referenced base document.

17.17 Interfaces for libpango-1.0

Table 17-104 defines the library name and shared object name for the libpango-1.0 library

Table 17-104 libpango-1.0 Definition

Library:	libpango-1.0
SONAME:	libpango-1.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

- [Gobject 2.32] Gobject 2.32 Reference Manual
- [Pango 1.30] Pango 1.30.1 Reference Manual

17.17.1 GTK Internationalized Text Layout and Rendering library

17.17.1.1 Interfaces for GTK Internationalized Text Layout and Rendering library

An LSB conforming implementation shall provide the generic functions for GTK Internationalized Text Layout and Rendering library specified in Table 17-105, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-105 libpango-1.0 - GTK Internationalized Text Layout and Rendering library Function Interfaces

17.18 Data Definitions for libpango-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpango-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.19 Interfaces for libpangocairo-1.0

Table 17-106 defines the library name and shared object name for the libpangocairo-1.0 library

Table 17-106 libpangocairo-1.0 Definition

Library:	libpangocairo-1.0
----------	-------------------

SONAME:	libpangocairo-1.0.so.0
---------	------------------------

The behavior of the interfaces in this library is specified by the following specifications:

[Gobject 2.32] Gobject 2.32 Reference Manual

[Pango 1.30] Pango 1.30.1 Reference Manual

17.19.1 Pango Cairo Rendering

17.19.1.1 Interfaces for Pango Cairo Rendering

An LSB conforming implementation shall provide the generic functions for Pango Cairo Rendering specified in Table 17-107, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-107 libpangocairo-1.0 - Pango Cairo Rendering Function Interfaces

pango_cairo_context_get_font_options [Pango 1.30]	pango_cairo_context_get_resolution [Pango 1.30]

17.20 Data Definitions for libpangocairo-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpangocairo-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

pango_xft_shutdown_display [Pango 1.30]	pango_xft_substitute_changed [Pango 1.30]

17.22 Data Definitions for libpangoxft-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpangoxft-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and

application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

An LSB conforming implementation shall provide the generic deprecated functions for GDK pixbuf rendering on drawables library specified in Table 17-115, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

**Table 17-115 libgdk_pixbuf-2.0 - GDK pixbuf rendering on drawables library
Deprecated Function Interfaces**

17.26 Data Definitions for libgdk_pixbuf-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk_pixbuf-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.27 Interfaces for libgdk_pixbuf_xlib-2.0

Table 17-117 defines the library name and shared object name for the libgdk_pixbuf_xlib-2.0 library

Table 17-117 libgdk_pixbuf_xlib-2.0 Definition

Library:	libgdk_pixbuf_xlib-2.0
SONAME:	libgdk_pixbuf_xlib-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gdk-pixbuf 2.26] Gdk-pixbuf 2.26.0 Reference Manual

17.27.1 GDK pixbuf rendering to an X drawable library

17.27.1.1 Interfaces for GDK pixbuf rendering to an X drawable library

An LSB conforming implementation shall provide the generic functions for GDK pixbuf rendering to an X drawable library specified in Table 17-118, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-118 libgdk_pixbuf_xlib-2.0 - GDK pixbuf rendering to an X drawable library Function Interfaces

17.28 Data Definitions for libgdk_pixbuf_xlib-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk_pixbuf_xlib-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.29 Interfaces for libgdk-x11-2.0

Table 17-119 defines the library name and shared object name for the libgdk-x11-2.0 library

Table 17-119 libgdk-x11-2.0 Definition

Library:	libgdk-x11-2.0
SONAME:	libgdk-x11-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gdk 2.10] Gdk 2.10.14 Reference Manual

[Gobject 2.32] Gobject 2.32 Reference Manual

17.29.1 GTK Drawing toolkit

17.29.1.1 Interfaces for GTK Drawing toolkit

An LSB conforming implementation shall provide the generic functions for GTK Drawing toolkit specified in Table 17-120, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-120 libgdk-x11-2.0 - GTK Drawing toolkit Function Interfaces

An LSB conforming implementation shall provide the generic data interfaces for GTK Drawing toolkit specified in Table 17-121, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-121 libgdk-x11-2.0 - GTK Drawing toolkit Data Interfaces

gdk_threads_unlock [Gdk 2.10]	

17.30 Data Definitions for libgdk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.30.1 gtk-2.0/gdk/gdk.h

17.31 Interfaces for libgtk-x11-2.0

Table 17-122 defines the library name and shared object name for the libgtk-x11-2.0 library

Table 17-122 libgtk-x11-2.0 Definition

Library:	libgtk-x11-2.0
SONAME:	libgtk-x11-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gobject 2.32] Gobject 2.32 Reference Manual

[Gtk 2.10] Gtk+ 2.10.14 Reference Manual

[LSB] This Specification

17.31.1 GTK main Widgets library

17.31.1.1 Interfaces for GTK main Widgets library

An LSB conforming implementation shall provide the generic functions for GTK main Widgets library specified in Table 17-123, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-123 libgtk-x11-2.0 - GTK main Widgets library Function Interfaces

An LSB conforming implementation shall provide the generic deprecated functions for GTK main Widgets library specified in Table 17-124, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

17.32 Data Definitions for libgtk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgtk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.32.1 gtk-2.0/gtk/gtk.h

17.33 Interface Definitions for libgtk-x11-2.0

The interfaces defined on the following pages are included in libgtk-x11-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 17.31 shall behave as described in the referenced base document.

gtk_button_get_image

Name

gtk_button_get_image — get button image widget

Synopsis

```

#include <gtk/gtk.h>
GtkWidget *gtk_button_get_image(GtkButton *button);

```

Description

The `gtk_button_get_image()` gets the widget that is currently set as the image of *button*. This may have been explicitly set by `gtk_button_set_image()` or constructed by `gtk_button_new_from_stock()`.

Return Value

The `gtk_button_get_image()` function returns a `GtkWidget` pointer referring to the image. If there is no associated image, `NULL` is returned.

Errors

No errors are defined.

gtk_button_set_image**Name**

gtk_button_set_image — set button image widget

Synopsis

```
#include <gtk/gtk.h>
void gtk_button_set_image(GtkButton *button, GtkWidget *widget);
```

Description

The `gtk_button_set_image()` function sets the image of *button* to the widget given by *widget*. Whether the image is displayed or not depends on the setting of the `gtk-button-images` property. It is not necessary to call `gtk_widget_show()` on the image.

Errors

No errors are defined.

gtk_toolbar_get_tooltips**Name**

gtk_toolbar_get_tooltips — retrieve whether tooltips are enabled

Synopsis

```
#include <gtk/gtk.h>
gboolean gtk_toolbar_get_tooltips(GtkToolbar * toolbar);
```

Description

`gtk_toolbar_get_tooltips()` shall retrieve whether the tooltips of *toolbar* are enabled.

This interface has been deprecated since version 2.14 of the GTK+ specification.

Return Value

`gtk_toolbar_get_tooltips()` shall return `TRUE` if the tooltips of *toolbar* are enabled, and `FALSE` if they are not.

See Also

`gtk_toolbar_set_tooltips()`

gtk_toolbar_set_tooltips

Name

gtk_toolbar_set_tooltips — set whether a toolbar's tooltips are active

Synopsis

```
#include <gtk/gtk.h>
void gtk_toolbar_set_tooltips(GtkToolbar * toolbar, gboolean enable);
```

Description

gtk_toolbar_set_tooltips() shall set whether the tooltips of *toolbar* are active. If the value of the parameter *enable* is `TRUE`, then the tooltips shall be made active; otherwise, they shall be made inactive.

This call may have no effect. The interface has been deprecated since version 2.14 of the GTK+ specification.

gtk_toolbar_get_tooltips()

XIII Qt Libraries

18 Libraries

18.1 Introduction

An conforming implementation shall support the following Qt libraries which provide interfaces for creating rich user applications, either graphical or console.

QtCore

A general-purpose application development library, not specific to graphical user interfaces. QtCore provides a main loop, threading classes, tool classes, template container classes, IO classes, and so on.

QtGui

The GUI part of Qt, provides a paint engine, text rendering engine, widgets, printing, PDF generation, accessibility classes, and so on.

QtXml

The XML support for Qt, provides fast XML parsing and DOM classes to traverse the XML tree.

QtOpenGL

The OpenGL integration for Qt, provides OpenGL rendering and embedding.

QtSql

The database part of Qt, provides access to databases and models that connect databases into the model/view framework of QtGui.

QtSvg

Renders Svg files into any context, for displaying on the screen, printing or embedding in PDF.

QtNetwork

Provides network server and client classes, TCP/IP, UDP, Http, Ftp, Url parsing support, and so on.

There are three main parts to the definition of each of these libraries.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although presented in the form of header files for convenience, should not be taken as representing complete header files, as they are a supplement to the source

specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

Note: While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

18.2 Interfaces for libQtCore

Table 18-1 defines the library name and shared object name for the libQtCore library

Table 18-1 libQtCore Definition

Library:	libQtCore
SONAME:	libQtCore.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI
 [LSB] This Specification
 [QtCore] QtCore 4.2.0
 [QtXml] QtXml 4.2.0

18.2.1 Qt4 Core Functions

18.2.1.1 Class data for QDynamicPropertyChangeEvent

The virtual table for the QDynamicPropertyChangeEvent class is described by Table 18-2

Table 18-2 Primary vtable for QDynamicPropertyChangeEvent

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QDynamicPropertyChangeEvent
vfunc[0]:	QDynamicPropertyChangeEvent::~~QDynamicPropertyChangeEvent()
vfunc[1]:	QDynamicPropertyChangeEvent::~~QDynamicPropertyChangeEvent()

18.2.1.2 Class data for QTimeLine

The virtual table for the QTimeLine class is described by Table 18-3

Table 18-3 Primary vtable for QTimeLine

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QTimeLine

vfunc[0]:	QTimeLine::metaObject() const
vfunc[1]:	QTimeLine::qt_metacast(char const*)
vfunc[2]:	QTimeLine::qt_metacall(QMetaObject::Call, int, void**)
vfunc[3]:	QTimeLine::~~QTimeLine()
vfunc[4]:	QTimeLine::~~QTimeLine()
vfunc[5]:	QObject::event(QEvent*)
vfunc[6]:	QObject::eventFilter(QObject*, QEvent*)
vfunc[7]:	QTimeLine::timerEvent(QTimerEvent*)
vfunc[8]:	QObject::childEvent(QChildEvent*)
vfunc[9]:	QObject::customEvent(QEvent*)
vfunc[10]:	QObject::connectNotify(char const*)
vfunc[11]:	QObject::disconnectNotify(char const*)
vfunc[12]:	QTimeLine::valueForTime(int) const

18.2.1.3 Interfaces for Qt4 Core Functions

An LSB conforming implementation shall provide the generic functions for Qt4 Core Functions specified in Table 18-4, with the full mandatory functionality as described in the referenced underlying specification.

Name	typeinfo name for QSignalMapper
basetype:	typeinfo for QObject

18.2.11.13 Class data for QSocketNotifier

The virtual table for the QSocketNotifier class is described by Table 18-77

Table 18-77 Primary vtable for QSocketNotifier

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QSocketNotifier
vfunc[0]:	QSocketNotifier::metaObject() const
vfunc[1]:	QSocketNotifier::qt_metacast(char const*)
vfunc[2]:	QSocketNotifier::qt_metacall(QMetaObject::Call, int, void**)
vfunc[3]:	QSocketNotifier::~~QSocketNotifier()
vfunc[4]:	QSocketNotifier::~~QSocketNotifier()
vfunc[5]:	QSocketNotifier::event(QEvent*)
vfunc[6]:	QObject::eventFilter(QObject*, QEvent*)
vfunc[7]:	QObject::timerEvent(QTimerEvent*)
vfunc[8]:	QObject::childEvent(QChildEvent*)
vfunc[9]:	QObject::customEvent(QEvent*)
vfunc[10]:	QObject::connectNotify(char const*)
vfunc[11]:	QObject::disconnectNotify(char const*)

The Run Time Type Information for the QSocketNotifier class is described by Table 18-78

Table 18-78 typeinfo for QSocketNotifier

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeinfo name for QSocketNotifier
basetype:	typeinfo for QObject

18.2.11.14 Class data for QFileSystemWatcher

The virtual table for the QFileSystemWatcher class is described by Table 18-79

Table 18-79 Primary vtable for QFileSystemWatcher

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QFileSystemWatcher
vfunc[0]:	QFileSystemWatcher::metaObject() const

vfunc[1]:	QFileSystemWatcher::qt_metacast(char const*)
vfunc[2]:	QFileSystemWatcher::qt_metacall(QMetaObject::Call, int, void**)
vfunc[3]:	QFileSystemWatcher::~QFileSystemWatcher()
vfunc[4]:	QFileSystemWatcher::~~QFileSystemWatcher()
vfunc[5]:	QObject::event(QEvent*)
vfunc[6]:	QObject::eventFilter(QObject*, QEvent*)
vfunc[7]:	QObject::timerEvent(QTimerEvent*)
vfunc[8]:	QObject::childEvent(QChildEvent*)
vfunc[9]:	QObject::customEvent(QEvent*)
vfunc[10]:	QObject::connectNotify(char const*)
vfunc[11]:	QObject::disconnectNotify(char const*)

18.2.11.15 Interfaces for Qt4 Input/Output

An LSB conforming implementation shall provide the generic functions for Qt4 Input/Output specified in Table 18-80, with the full mandatory functionality as described in the referenced underlying specification.

Table 18-80 libQtCore - Qt4 Input/Output Function Interfaces

18.3 Data Definitions for libQtCore

This section defines global identifiers and their values that are associated with interfaces contained in libQtCore. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.3.1 QtCore/qabstracteventdispatcher.h

```
class QAbstractEventDispatcher;
typedef struct QPair<int, int> QAbstractEventDispatcher::TimerInfo;
```

```
typedef bool QAbstractEventDispatcher::EventFilter;
```

18.3.2 QtCore/qabstractfileengine.h

```
class QAbstractFileEngine;
enum QAbstractFileEngine::FileFlag {
    ExeOtherPerm = 1,
    WriteOtherPerm = 2,
    ReadOtherPerm = 4,
    ExeGroupPerm = 16,
    WriteGroupPerm = 32,
    ReadGroupPerm = 64,
    ExeUserPerm = 256,
    WriteUserPerm = 512,

18.4 Interface Definitions for libQtCore

The interfaces defined on the following pages are included in libQtCore and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 18.2 shall behave as described in the referenced base document.

_Z5qFreePv

Name

qFree — free the memory space

Synopsis

```

#include <QtCore/qglobal.h>
void qFree (void *ptr);

```

Description

The qFree() function has the same behavior as the free() function described in POSIX 1003.1-2008 (ISO/IEC 9945-2009).

_Z7qgetenvPKc**Name**

`qgetenv` — get value of an environment variable

Synopsis

```
#include <QtCore/qglobal.h>
QByteArray qgetenv (const char *varName);
```

Description

The `qgetenv()` function has the same behavior as the `getenv()` function described in POSIX 1003.1-2008 (ISO/IEC 9945-2009) except that the result is represented as `QByteArray`.

_ZN11QMetaObject7connectEPK7QObjectiS2_iiPi**Name**

`QMetaObject::connect` — connect signals

Synopsis

```
#include <QtCore/qmetaobject.h>
bool QMetaObject::connect(const QObject * sender, int signal_index,
const QObject * receiver, int method_index, int type, int * types);
```

Description

The `QMetaObject::connect()` function shall connect the signal with `signal_index` index from the sender to the receiver's slot.

The `type` specifies connection type and should have one of the `Qt::ConnectionType` values.

`types` is a 0-terminated vector of meta types for queued connections.

If `signal_index` is -1, then the function shall effectively connect all signals from the sender to the receiver's slot.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN16QCoreApplication10unixSignalEi**Name**

`QCoreApplication::unixSignal` — emit a signal whenever a Unix signal is received

Synopsis

```
#include <QtCore/qcoreapplication.h>
```

```
void QCoreApplication::unixSignal (int number);
```

Description

The `QCoreApplication::unixSignal()` is a Qt signal function.

The signal is emitted whenever Unix signal is received by the application. The Unix signal received is specified by its number *number*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN4QDir21nameFiltersFromStringERK7QString

Name

`QDir::nameFiltersFromString` — retrieve a list of name filters from the given

Synopsis

```
#include <QtCore/qdir.h>
static QStringList QDir::nameFiltersFromString (const QString
&nameFilter);
```

Description

The `QDir::nameFiltersFromString()` function shall return a list of name filters from the given string *nameFilter*.

If there is more than one filter in the string, then each pair of filters should be separated by a space or by a semicolon.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QString4freeEPNS_4DataE

Name

`QString::free` — free the memory space

Synopsis

```
#include <QtCore/qstring.h>
static void QString::free (Data *d);
```

Description

The `QString::free()` function shall free the memory area allocated for the *d* object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QHashData12allocateNodeEv**Name**

`QHashData::allocateNode` — allocate memory for the node

Synopsis

```
#include <QtCore/qhash.h>
void * QHashData::allocateNode(void);
```

Description

The `QHashData::allocateNode()` function shall allocate the memory for the object's node.

The call to this function is equivalent to the call for the `qMalloc()` function with the argument equal to the `nodeSize` property of the object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QHashData8freeNodeEPv**Name**

`QHashData::freeNode` — free the memory occupied by the node

Synopsis

```
#include <QtCore/qhash.h>
void QHashData::freeNode(void * node);
```

Description

The `QHashData::freeNode()` function shall free the memory occupied by the *node*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QMetaType12registerTypeEPKcPFvPvEPFS2_PKvE**Name**

`QMetaType::registerType` — register a user type for marshalling

Synopsis

```
#include <QtCore/qmetatype.h>
static int QMetaType::registerType(const char * typeName, Destructor
destructor, Constructor constructor);
```

Description

The `QMetaType::registerType()` function shall register a user type for marshalling, with a *typeName* name, *destructor* destructor, and a *constructor* constructor.

The function shall return the type's handle on success, or -1 if the type could not be registered.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

`_ZNK11QMetaObject4castEP7QObject`

Name

`QMetaObject::cast` — check if an object inherits from the meta-object

Synopsis

```
#include <QtCore/qobjectdefs.h>
QObject * QMetaObject::cast (QObject *obj);
```

Description

The `QMetaObject::cast()` function shall check if the object pointed by *obj* inherits from the current meta-object. If yes, the function shall return *obj*. Otherwise it shall return 0.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

`_ZNK13QMetaProperty12hasStdCppSetEv`

Name

`QMetaProperty::hasStdCppSet` — check if a property follows "name" / "ssetName" pattern

Synopsis

```
#include <QtCore/qmetaobject.h>
bool QMetaProperty::hasStdCppSet(void);
```

Description

The `QMetaProperty::hasStdCppSet()` function shall return true if the property has a C++ setter function that follows Qt's standard "name" / "setName" pattern. This function can be queried in order to avoid expensive `QObject::setProperty()` calls. All properties in Qt should follow the pattern mentioned.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK21QPersistentModelIndex10internalIdEv**Name**

`QPersistentModelIndex::internalId` — get the id used to associate the index with the internal data structure

Synopsis

```
#include <QtCore/qabstractitemmodel.h>
qint64 QPersistentModelIndex::internalId (void);
```

Description

The `QPersistentModelIndex::internalId()` function shall return the internal integer identifier used by the model to associate the index with the internal data structure.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK21QPersistentModelIndex15internalPointerEv**Name**

`QPersistentModelIndex::internalPointer` — get the pointer used to associate the index with the internal data structure

Synopsis

```
#include <QtCore/qabstractitemmodel.h>
void * QPersistentModelIndex::internalPointer (void);
```

Description

The `QPersistentModelIndex::internalPointer()` function shall return the internal pointer used by the model to associate the index with the internal data structure.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

ZNK4QUrlItERKS**Name**

`QUrl::operator<` — compare URLs

Synopsis

```
#include <QtCore/qurl.h>
bool QUrl::operator< (const QUrl &url);
```

Description

This operator shall return true if the URL represented by its caller is "less than" the given URL.

This operator provides a means of ordering URLs. If two URLs are not equal than one of them should be "less than" the other. No exact comparison algorithm is specified.

This operator is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK5QFile10fileEngineEv**Name**

`QFile::fileEngine` — get the QIOEngine for this QFile object

Synopsis

```
#include <QtCore/qfile.h>
virtual QAbstractFileEngine * QFile::fileEngine (void);
```

Description

The `QFile::fileEngine()` function shall return the the QIOEngine for this QFile object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

QUuid::operator >**Name**

`QUuid::operator >` — UUID greater-than comparison operator

Synopsis

```
public class QUuid {
    bool operator >(const QUuid & other);
}
```

Description

`QUuid::operator >` has the same specification as in QtCore 4.2.0, except for differences noted below.

Return Value

Returns true if this QUuid has the same variant field as the other QUuid and is lexicographically after the other QUuid. If the other QUuid has a different variant field, the return value is unspecified.

QUuid::operator <**Name**

`QUuid::operator <` — UUID less-than comparison operator

Synopsis

```
public class QUuid {
    bool operator <(const QUuid & other);
}
```

Description

`QUuid::operator <` has the same specification as in QtCore 4.2.0, except for differences noted below.

Return Value

Returns true if this QUuid has the same variant field as the other QUuid and is lexicographically before the other QUuid. If the other QUuid has a different variant field, the return value is unspecified.

_ZNK7QObject9queryListEPKcS1_bb**Name**

`QObject::queryList` — search the children and optionally grandchildren of the object

Synopsis

```
#include <QtCore/qobject.h>
QObjectList QObject::queryList(const char * inheritsClass = 0 , const
char * objName = 0, bool regexpMatch = true, bool recursiveSearch =
true);
```

Description

The `QObject::queryList()` function shall search the children and optionally grandchildren of this object.

The function shall return a list of those objects that are named or that match *objName* and inherit *inheritsClass*. If *inheritsClass* is 0 (the default), all classes match. If *objName* is 0 (the default), all object names match.

If *regexpMatch* is true (the default), *objName* is a regular expression that the objects's names must match. The syntax is that of a `QRegExp`. If *regexpMatch* is false, *objName* is a string and object names must match it exactly.

Note that *inheritsClass* uses single inheritance from `QObject`, the way `inherits()` does. According to `inherits()`, `QWidget` inherits `QObject` but not `QPaintDevice`. This does not quite match reality, but is the best that can be done on the wide variety of compilers Qt supports.

Finally, if *recursiveSearch* is true (the default), the `QObject::queryList()` shall search n-th-generation as well as first-generation children.

Warning: Delete the obtained list as soon you have finished using it. The list contains pointers that may become invalid at almost any time without notice (as soon as the user closes a window you may have dangling pointers, for example).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

18.5 Interfaces for libQtGui

Table 18-98 defines the library name and shared object name for the `libQtGui` library

Table 18-98 libQtGui Definition

Library:	libQtGui
SONAME:	libQtGui.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI
 [LSB] This Specification
 [QtGui] QtGui 4.2.0
 [QtXml] QtXml 4.2.0

18.5.1 Qt4 GUI Functions

18.5.1.1 Interfaces for Qt4 GUI Functions

An LSB conforming implementation shall provide the generic functions for Qt4 GUI Functions specified in Table 18-99, with the full mandatory functionality as described in the referenced underlying specification.

Table 18-99 libQtGui - Qt4 GUI Functions Function Interfaces

18.5.9.30 Interfaces for Qt4 Models and Views

An LSB conforming implementation shall provide the generic functions for Qt4 Models and Views specified in Table 18-257, with the full mandatory functionality as described in the referenced underlying specification.

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 Models and Views specified in Table 18-258, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 18-258 libQtGui - Qt4 Models and Views Deprecated Function Interfaces
