18.5.22.22 Interfaces for Qt4 2D Graphics

An LSB conforming implementation shall provide the generic functions for Qt4 2D Graphics specified in Table 18-519, with the full mandatory functionality as described in the referenced underlying specification.

Table 18-519 libQtGui - Qt4 2D Graphics Function Interfaces

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 2D Graphics specified in Table 18-520, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 18-520 libQtGui - Qt4 2D Graphics Deprecated Function Interfaces

_ZN22QGraphicsItemAnimation5resetEv [QtXml]

18.6 Data Definitions for libQtGui

This section defines global identifiers and their values that are associated with interfaces contained in libQtGui. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.6.1 QtGui/qabstractbutton.h

18.7 Interface Definitions for libQtGui

The interfaces defined on the following pages are included in libQtGui and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 18.5 shall behave as described in the referenced base document.

_ZN11QGridLayout21setDefaultPositioningEiN2Qt11OrientationE

Name

`QGridLayout::setDefaultPositioning` — set the positioning mode

Synopsis

```
#include <QtGui/qgridlayout.h>
void QGridLayout::setDefaultPositioning (int n, Qt::Orientation orient);
```

Description

The `QGridLayout::setDefaultPositioning()` function shall set the positioning mode used by `QGridLayout::addItem()`.

If *orient* is `Qt::Horizontal`, the layout is expanded to *n* columns, and items will be added columns-first. Otherwise it is expanded to *n* rows and items will be added rows-first.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN11QHeaderView13updateSectionEi

Name

`QHeaderView::updateSection` — update HeaderView section

Synopsis

```
#include <QtGui/qheaderview.h>
void QHeaderView::updateSection (int logicalIndex);
```

Description

The `QHeaderView::updateSection()` function shall update the section specified by the given *logicalIndex*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine13setSystemClipERK7QRegion**Name**

`QPaintEngine::setSystemClip` — set the system clip for the engine

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setSystemClip (const QRegion &region);
```

Description

The `QPaintEngine::setSystemClip()` function shall set the system clip for the engine. The system clip defines the basis area that the engine has to draw in. All clips that are set must be an intersection with the system clip.

The system clip can be reset to no clip by setting an empty region.

The function takes effect only if the engine is not active.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine13setSystemRectERK5QRect**Name**

`QPaintEngine::setSystemRect` — set the target rect for drawing within the backing store

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setSystemRect (const QRect &rect);
```

Description

The `QPaintEngine::setSystemRect()` function shall set the target rect for drawing within the backing store.

The function takes effect only if the engine is not active.

This function should only be used by the backing store, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine14setPaintDeviceEP12QPaintDevice**Name**

`QPaintEngine::setPaintDevice` — set the paintdevice that the engine operates on

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setPaintDevice (QPaintDevice *device);
```

Description

The `QPaintEngine::setPaintDevice()` function shall set the paint device that this engine operates on to *device*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

QPixmapCache::cacheLimit**Name**

`QPixmapCache::cacheLimit` — UUID greater-than comparison operator

Synopsis

```
public class QPixmapCache {
    bool operator >(const QPixmapCache & other);
}
```

Description

`QPixmapCache::cacheLimit` has the same specification as in QtGui 4.2.0, except for differences noted below.

Default Value

Default value of the cache limit is unspecified.

_ZN13QGraphicsItem10addToIndexEv**Name**

`QGraphicsItem::addToIndex` — add the item from the scene's index

Synopsis

```
#include <QtGui/qgraphicsitem.h>
void QGraphicsItem::addToIndex (void);
```

Description

The `QGraphicsItem::addToIndex()` function shall add the calling object to the scene's index.

This function can be called in conjunction with the `removeFromIndex()` function to ensure the index bookkeeping is correct when the item's position, transformation or shape changes.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QGraphicsItem12setExtensionENS_9ExtensionERK8QVariant**Name**

`QGraphicsItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsItem::setExtension()` function doesn't do anything. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QGraphicsItem15removeFromIndexEv**Name**

`QGraphicsItem::removeFromIndex` — remove the item from the scene's index

Synopsis

```
#include <QtGui/qgraphicsitem.h>
void QGraphicsItem::removeFromIndex (void);
```

Description

The `QGraphicsItem::removeFromIndex()` function shall remove the calling object from the scene's index.

This function can be called in conjunction with the `addToIndex()` function to ensure the index bookkeeping is correct when the item's position, transformation or shape changes.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QInputContext14setFocusWidgetEP7QWidget**Name**

`QInputContext::setFocusWidget` — set the input focus for the current context

Synopsis

```
#include <QtGui/qinputcontext.h>
void QInputContext::setFocusWidget(QWidget * w);
```

Description

The `QInputContext::setFocusWidget()` shall set the widget that has an input focus for this input context to *w*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

See Also

`focusWidget()`

_ZN13QTextDocument14appendUndoItemEP17QAbstractUndoItem

Name

`QTextDocument::appendUndoItem` — append an item to the undo stack

Synopsis

```
#include <QtGui/qtextdocument.h>
void QTextDocument::appendUndoItem(QAbstractUndoItem * item);
```

Description

The `QTextDocument::appendUndoItem()` function shall append a custom undo *item* to the undo stack.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView13doItemsLayoutEv

Name

`QAbstractItemView::doItemsLayout` — lay out the items in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::doItemsLayout(void);
```

Description

The `QAbstractItemView::doItemsLayout()` function shall lay out the items in the view.

Inheritors of the `QAbstractItemView` class are intended to overload this function. The default implementation just calls `updateGeometries()` function and update the viewport.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView16updateEditorDataEv**Name**

`QAbstractItemView::updateEditorData` — update the data shown in the open editor widgets in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::updateEditorData(void);
```

Description

The `QAbstractItemView::updateEditorData()` function shall update the data shown in the open editor widgets in the view.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView22updateEditorGeometriesEv**Name**

`QAbstractItemView::updateEditorGeometries` — update geometry of open editor widgets in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::updateEditorGeometries(void);
```

Description

The `QAbstractItemView::updateEditorGeometries()` function shall update the geometry of the open editor widgets in the view.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView23verticalScrollbarActionEi**Name**

`QAbstractItemView::verticalScrollbarAction` — dummy hook

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::verticalScrollbarAction(int action);
```

Description

The `QAbstractItemView::verticalScrollbarAction()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView25horizontalScrollbarActionEi

Name

`QAbstractItemView::horizontalScrollbarAction` — dummy hook

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::horizontalScrollbarAction(int action);
```

Description

The `QAbstractItemView::horizontalScrollbarAction()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsLineItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsLineItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsLineItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsLineItem::setExtension()` function does nothing. It is provided as a hook to avoid problems with adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsPathItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsPathItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPathItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsPathItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsRectItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsRectItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsRectItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsRectItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsTextItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsTextItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsTextItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsTextItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN18QDragResponseEventC1Eb, _ZN18QDragResponseEventC2Eb

Name

`QDragResponseEvent::QDragResponseEvent` — `QDragResponseEvent` constructor

Synopsis

```
#include <QtGui/qevent.h>
QDragResponseEvent::QDragResponseEvent(bool accepted);
```

Description

The `QDragResponseEvent::QDragResponseEvent()` function shall construct a drag response event containing the *accepted* value, indicating whether the drag and drop operation was accepted by the recipient.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QGraphicsPixmapItem12setExtensionEN13QGraphicsItem 9ExtensionERK8QVariant

Name

`QGraphicsPixmapItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPixmapItem::setExtension(Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsPixmapItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QGraphicsSceneEvent9setWidgetEP7QWidget**Name**

`QGraphicsSceneEvent::setWidget` — Sets the widget related to the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneEvent::setWidget (QWidget *widget);
```

Description

The `QGraphicsSceneEvent::setWidget()` function shall set the widget related to the event to *source*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

**_ZN19QGraphicsSceneEventC1EN6QEvent4TypeE,
_ZN19QGraphicsSceneEventC2EN6QEvent4TypeE****Name**

`QGraphicsSceneEvent::QGraphicsSceneEvent` — `QGraphicsSceneEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneEvent::QGraphicsSceneEvent (QEvent::Type type);
```

Description

Constructs a new `QGraphicsSceneEvent` of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

**_ZN19QToolBarChangeEventC1Eb,
_ZN19QToolBarChangeEventC2Eb****Name**

`QToolBarChangeEvent::QToolBarChangeEvent` — `QToolBarChangeEvent` constructor

Synopsis

```
#include <QtGui/qevent.h>
QToolBarChangeEvent::QToolBarChangeEvent (bool state);
```

Description

The `QToolBarChangeEvent::QToolBarChangeEvent()` function shall construct a `QToolBarChangeEvent` object given the current button state in *state*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN20QGraphicsEllipseItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsEllipseItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsEllipseItem::setExtension (Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsEllipseItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN20QGraphicsPolygonItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsPolygonItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPolygonItem::setExtension (Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsPolygonItem::setExtension()` does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEvent11setScenePosERK7QPointF**Name**

`QGraphicsSceneHelpEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHelpEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneHelpEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEvent12setScreenPosERK6QPoint**Name**

`QGraphicsSceneHelpEvent::setScreenPos` — set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHelpEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneHelpEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEventC1EN6QEvent4TypeE, _ZN23QGraphicsSceneHelpEventC2EN6QEvent4TypeE

Name

`QGraphicsSceneHelpEvent::QGraphicsSceneHelpEvent` —
`QGraphicsSceneHelpEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneHelpEvent::QGraphicsSceneHelpEvent (QEvent::Type type);
```

Description

Constructs a new `QGraphicsSceneHelpEvent` of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSimpleTextItem12setExtensionEN13QGraphicsItem9ExtensionERK8QVariant

Name

`QGraphicsSimpleTextItem::setExtension` — set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsSimpleTextItem::setExtension(Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsSimpleTextItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QAbstractPageSetupDialog7printerEv

Name

`QAbstractPageSetupDialog::printer` — get the printer that this page setup dialog is operating on

Synopsis

```
#include <QtGui/qabstractpagesetupdialog.h>
QPrinter * QAbstractPageSetupDialog::printer(void);
```

Description

The `QAbstractPageSetupDialog::printer()` function shall return the printer that this page setup dialog is operating on.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QAbstractPageSetupDialogC1EP8QPrinterP7QWidget, _ZN24QAbstractPageSetupDialogC2EP8QPrinterP7QWidget

Name

`QAbstractPageSetupDialog::QAbstractPageSetupDialog` — `QAbstractPageSetupDialog` constructor

Synopsis

```
#include <QtGui/qabstractpagesetupdialog.h>
QAbstractPageSetupDialog::QAbstractPageSetupDialog(QPrinter * printer,
QWidget * parent);
```

Description

The `QAbstractPageSetupDialog::QAbstractPageSetupDialog()` function shall construct the page setup dialog for the printer *printer* with *parent* as parent widget.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEvent11setScenePosERK7QPointF

Name

`QGraphicsSceneHoverEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneHoverEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEvent12setScreenPosERK6QPoint**Name**

`QGraphicsSceneHoverEvent::setScreenPos` — set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneHoverEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEvent6setPosERK7QPointF**Name**

`QGraphicsSceneHoverEvent::setPos` — set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneHoverEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEventC1EN6QEvent4TypeE, _ZN24QGraphicsSceneHoverEventC2EN6QEvent4TypeE

Name

`QGraphicsSceneHoverEvent::QGraphicsSceneHoverEvent` —
`QGraphicsSceneHoverEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneHoverEvent::QGraphicsSceneHoverEvent (QEvent::Type type);
```

Description

Constructs a new `QGraphicsSceneHoverEvent` of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent10setButtonsE6QFlagsIN2Qt 11MouseButtonEE

Name

`QGraphicsSceneMouseEvent::setButtons` — set the mouse buttons that
 were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtons (Qt::MouseButtonss buttons);
```

Description

The `QGraphicsSceneMouseEvent::setButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent10setLastPosERK7QPointF**Name**

`QGraphicsSceneMouseEvent::setLastPos` — set the last recorded mouse cursor position in item coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastPos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastPos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in item coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent11setScenePosERK7QPointF**Name**

`QGraphicsSceneMouseEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent12setModifiersE6QFlagsIN2Qt16KeyboardModifierEE

Name

`QGraphicsSceneMouseEvent::setModifiers` — set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneMouseEvent::setModifiers    (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneMouseEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event was created) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent12setScreenPosERK6QPoint

Name

`QGraphicsSceneMouseEvent::setScreenPos` — set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneMouseEvent::setScreenPos    (const QPoint    &pos);
```

Description

The `QGraphicsSceneMouseEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent15setLastScenePosERK7QPointF

Name

`QGraphicsSceneMouseEvent::setLastScenePos` — set the last recorded mouse cursor position in scene coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastScenePos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in scene coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent16setButtonDownPosEN2Qt11MouseButtonERK7QPointF

Name

`QGraphicsSceneMouseEvent::setButtonDownPos` — set the mouse position where the specified button was clicked in item coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtonDownPos (Qt::MouseButton button,
const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownPos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in item coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent16setLastScreenPosERK6QPoint

Name

`QGraphicsSceneMouseEvent::setLastScreenPos` — set the last recorded mouse cursor position in screen coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastScreenPos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in screen coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent21setButtonDownScenePosEN2Qt11MouseButtonERK7QPointF

Name

`QGraphicsSceneMouseEvent::setButtonDownScenePos` — set the mouse position where the specified button was clicked in scene coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtonDownScenePos (Qt::MouseButton
button, const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownScenePos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in scene coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent22setButtonDownScreenPos EN2Qt11MouseButtonERK6QPoint

Name

`QGraphicsSceneMouseEvent::setButtonDownScreenPos` — set the mouse position where the specified button was clicked in screen coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtonDownScreenPos (Qt::MouseButton
button, const QPoint &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownScreenPos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in screen coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent6setPosERK7QPointF

Name

`QGraphicsSceneMouseEvent::setPos` — set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent9setButtonEN2Qt11MouseButtonE

Name

`QGraphicsSceneMouseEvent::setButton` — set the mouse button associated with event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButton (Qt::MouseButton button);
```

Description

The `QGraphicsSceneMouseEvent::setButton()` function shall set the mouse button associated with the event (i.e. the button that caused the event) to *button*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEventC1EN6QEvent4TypeE, _ZN24QGraphicsSceneMouseEventC2EN6QEvent4TypeE

Name

`QGraphicsSceneMouseEvent::QGraphicsSceneMouseEvent` — `QGraphicsSceneMouseEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneMouseEvent::QGraphicsSceneMouseEvent (QEvent::Type type);
```

Description

Constructs a new `QGraphicsSceneMouseEvent` of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent10setButtonsE6QFlagsIN2Qt11MouseButtonEE

Name

`QGraphicsSceneWheelEvent::setButtons` — set the mouse buttons that were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setButtons (Qt::MouseButtonss buttons);
```

Description

The `QGraphicsSceneWheelEvent::setButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent11setScenePosERK7QPointF

Name

`QGraphicsSceneWheelEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneWheelEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent12setModifiersE6QFlagsIN2Qt16KeyboardModifierEE

Name

`QGraphicsSceneWheelEvent::setModifiers` — set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneWheelEvent::setModifiers    (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneWheelEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event occurred) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent12setScreenPosERK6QPoint

Name

`QGraphicsSceneWheelEvent::setScreenPos` — set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneWheelEvent::setScreenPos    (const QPoint    &pos);
```

Description

The `QGraphicsSceneWheelEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent6setPosERK7QPointF**Name**

`QGraphicsSceneWheelEvent::setPos` — set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneWheelEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent8setDeltaEi**Name**

`QGraphicsSceneWheelEvent::setDelta` — set the distance that the wheel is rotated

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setDelta (int delta);
```

Description

The `QGraphicsSceneWheelEvent::setDelta()` function shall set the distance that the wheel is rotated to *delta*, in eighths (1/8s) of a degree.

A positive value indicates that the wheel was rotated forwards away from the user; a negative value indicates that the wheel was rotated backwards toward the user.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEventC1EN6QEvent4TypeE, _ZN24QGraphicsSceneWheelEventC2EN6QEvent4TypeE

Name

`QGraphicsSceneWheelEvent::QGraphicsSceneWheelEvent` —
`QGraphicsSceneWheelEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneWheelEvent::QGraphicsSceneWheelEvent (QEvent::Type type);
```

Description

Constructs a new `QGraphicsSceneWheelEvent` of the specified type *type* which should be always `QEvent::GraphicsSceneWheel`.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent10setButtonsE6QFlagsIN2 Qt11MouseButtonEE

Name

`QGraphicsSceneDragDropEvent::setButtons` — set the mouse buttons that were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setButtons (Qt::MouseButtonss
buttons);
```

Description

The `QGraphicsSceneDragDropButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent11setMimeDataEPK9QMimeData

Name

`QGraphicsSceneDragDropEvent::setMimeData` — set the MIME data for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setMimeData (const QMimeData *data);
```

Description

The `QGraphicsSceneDragDropEvent::setMimeData()` function shall set the MIME data for the event *data*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent11setScenePosERK7QPointF

Name

`QGraphicsSceneDragDropEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setScenePos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent12setModifiersE6QFlagsIN2Qt16KeyboardModifierEE

Name

`QGraphicsSceneDragDropEvent::setModifiers` — set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setModifiers (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneDragDropEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event was created) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent12setScreenPosERK6QPoint

Name

`QGraphicsSceneDragDropEvent::setScreenPos` — set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent17setProposedActionEN2Qt10DropActionE

Name

`QGraphicsSceneDragDropEvent::setProposedAction` — set the proposed action for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneDragDropEvent::setProposedAction    (Qt::DropAction
action);
```

Description

The `QGraphicsSceneDragDropEvent::setProposedAction()` function shall set the proposed action to *action*.

The *action* should be one of the possible actions set using the `QGraphicsSceneDragDropEvent::setPossibleActions()` function.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent18setPossibleActionsE6QFlagsIN2Qt10DropActionEE

Name

`QGraphicsSceneDragDropEvent::setPossibleActions` — set the possible drop actions that the drag can result in

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void    QGraphicsSceneDragDropEvent::setPossibleActions    (Qt::DropActions
actions);
```

Description

The `QGraphicsSceneDragDropEvent::setPossibleActions()` function shall set the possible drop actions that the drag can result in to *actions*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent6setPosERK7QPointF**Name**

`QGraphicsSceneDragDropEvent::setPos` — set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent9setSourceEP7QWidget**Name**

`QGraphicsSceneDragDropEvent::setSource` — set the source widget for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setSource (QWidget *source);
```

Description

The `QGraphicsSceneDragDropEvent::setSource()` function shall set the source widget (i.e. the widget that created the drop event) to *source*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEventC1EN6QEvent4TypeE, _ZN27QGraphicsSceneDragDropEventC2EN6QEvent4TypeE

Name

`QGraphicsSceneDragDropEvent::QGraphicsSceneDragDropEvent` — `QGraphicsSceneDragDropEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneDragDropEvent::QGraphicsSceneDragDropEvent (QEvent::Type
type = None);
```

Description

Constructs a new `QGraphicsSceneDragDropEvent` of the specified type. The type should have one of the following values:

- `QEvent::GraphicsSceneDragEnter`
- `QEvent::GraphicsSceneDragLeave`
- `QEvent::GraphicsSceneDragMove`
- `QEvent::GraphicsSceneDrop`

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN2Qt12codecForHtmlERK10QByteArray

Name

`Qt::codecForHtml` — detect encoding of the provided snippet of html

Synopsis

```
#include <QtGui/qtextdocument.h>
QTextCodec * Qt::codecForHtml (const QByteArray &ba);
```

Description

The `Qt::codecForHtml()` function has the same behavior as the `QTextCodec::codecForHtml()` function described in QtCore 4.2.0.

_ZN30QGraphicsSceneContextMenuEvent11setScenePosERK7QPointF

Name

`QGraphicsSceneContextMenuEvent::setScenePos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setScenePos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent12setModifiersE6QFlagsIN2Qt16KeyboardModifierEE

Name

`QGraphicsSceneContextMenuEvent::setModifiers` — set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setModifiers
(Qt::KeyboardModifiers modifiers);
```

Description

The `QGraphicsSceneContextMenuEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event occurred) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent12setScreenPosERK6QPoint

Name

`QGraphicsSceneContextMenuEvent::setScreenPos` — set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setScreenPos()` shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent6setPosERK7QPointF

Name

`QGraphicsSceneContextMenuEvent::setPos` — set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setPos()` shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent9setReasonENS_6ReasonE**Name**

`QGraphicsSceneContextMenuEvent::setReason` — set the reason for the context menu event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setReason (Reason reason);
```

Description

The `QGraphicsSceneContextMenuEvent::setReason()` function shall set the reason for the context menu to *reason*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEventC1EN6QEvent4TypeE, _ZN30QGraphicsSceneContextMenuEventC2EN6QEvent4TypeE**Name**

`QGraphicsSceneContextMenuEvent::QGraphicsSceneContextMenuEvent` — `QGraphicsSceneContextMenuEvent` constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneContextMenuEvent::QGraphicsSceneContextMenuEvent
(QEvent::Type type = None);
```

Description

Constructs the graphics scene context menu event of the specified type.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN5QFont7cleanupEv**Name**

`QFont::cleanup` — cleanup the font system

Synopsis

```
#include <QtGui/qfont.h>
void QFont::cleanup(void);
```

Description

The `QFont::cleanup()` function shall cleanup the font system. This function should be called automatically when the application is finished.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN6QColor10invalidateEv

Name

`QColor::invalidate` — mark the color as invalid

Synopsis

```
#include <QtGui/qcolor.h>
void QColor::invalidate (void);
```

Description

The `QColor::invalidate()` function shall mark the color as invalid and set all components to zero. Alpha channel should be set to fully opaque (for compatibility with Qt3).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QLayout11widgetEventEP6QEvent

Name

`QLayout::widgetEvent` — perform child widget layout when the parent widget is resized

Synopsis

```
#include <QtGui/qlayout.h>
void QLayout::widgetEvent (QEvent *e);
```

Description

The `QLayout::widgetEvent()` function shall perform child widget layout when the parent widget is resized. It should also handle removal of widgets.

The event `e` should have one of the following values:

- `QEvent::Resize`
- `QEvent::ChildRemoved`
- `QEvent::LayoutRequest`

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QPixmap19x11SetDefaultScreenEi**Name**

`QPixmap::x11SetDefaultScreen` — sets the default screen of the `QPixmap` object

Synopsis

```
#include <QtGui/qpixmap.h>
static int QPixmap::x11SetDefaultScreen (int screen);
```

Description

The `QPixmap::x11SetDefaultScreen()` function shall set the internal 'defaultScreen' property of the `QPixmap` object to *screen*.

The function shall return the previous defaultScreen value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QWidget11createWinIdEv**Name**

`QWidget::createWinId` — ensure that the widget is known to the windowing system

Synopsis

```
#include <QtGui/qwidget.h>
void QWidget::createWinId(void);
```

Description

The `QWidget::createWinId()` function shall ensure that the widget has a window system identifier (that is, known to the windowing system) and create such an identifier if it doesn't exist.

Value of the internal identifier can be checked by the inline `internalWinId()` member of the `QWidget` class.

**_ZN7QWidget19overrideWindowStateE6QFlagsIN2Qt11WindowS
tateEE****Name**

`QWidget::overrideWindowState` — set the window state on child widgets

Synopsis

```
#include <QtGui/qwidget.h>
void QWidget::overrideWindowState(Qt::WindowStates state);
```

Description

The `QWidget::overrideWindowState()` function shall set the window state on child widgets similar to the `setWindowState()`.

The difference is that the window state changed event has the `isOverride()` flag set.

This function is provided mainly to keep old applications that use `Q3Workspace` working.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN8QMenuBar15setCornerWidgetEP7QWidgetN2Qt6CornerE

Name

`QMenuBar::setCornerWidget` — set the position of the widget

Synopsis

```
#include <QtGui/qmenubar.h>
void QMenuBar::setCornerWidget(QWidget * w, Qt::Corner corner =
Qt::TopRightCorner);
```

Description

The `QMenuBar::setCornerWidget()` function shall set widget *w* to be shown directly on the left of the first or the right of the last menu item, depending on *corner*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QListView13doItemsLayoutEv

Name

`QListView::doItemsLayout` — layout items

Synopsis

```
#include <QtGui/qlistview.h>
void QListView::doItemsLayout(void);
```

Description

The `QListView::doItemsLayout()` function shall layout the items according to the flow and wrapping properties.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QListView14resizeContentsEii**Name**

`QListView::resizeContents` — resize the internal contents of the view

Synopsis

```
#include <QtGui/qlistview.h>
void QListView::resizeContents(int width, int height);
```

Description

The `QListView::resizeContents()` function shall resize the internal contents to *width* and *height* and set the scroll bar ranges accordingly.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel13setProxyModelERK11QModelIndex**Name**

`QProxyModel::setProxyModel` — change the model pointer to point to the proxy model

Synopsis

```
#include <QtGui/qproxymodel.h>
QModelIndex QProxyModel::setProxyModel(const QModelIndex &
source_index);
```

Description

The `QProxyModel::setProxyModel()` function shall change the model pointer in the given *source_index* to point to the proxy model.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel14connectToModelEPK18QAbstractItemModel**Name**

`QProxyModel::connectToModel` — connect to all the signals emitted by the model

Synopsis

```
#include <QtGui/qproxymodel.h>
void QProxyModel::connectToModel(const QAbstractItemModel * model);
```

Description

The `QProxyModel::connectToModel()` function shall connect to all the signals emitted by given *model*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel14setSourceModelERK11QModelIndex

Name

`QProxyModel::setSourceModel` — INSERT PURPOSE HERE

Synopsis

```
#include <QtGui/qproxymodel.h>
QModelIndex QProxyModel::setSourceModel(const QModelIndex &
proxy_index);
```

Description

The `QProxyModel::setSourceModel()` function shall change the model pointer in the given *proxy_index* to point to the source model.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel19disconnectFromModelEPK18QAbstractItemModel

Name

`QProxyModel::disconnectFromModel` — disconnect from all signals emitted by the model

Synopsis

```
#include <QtGui/qproxymodel.h>
void QProxyModel::disconnectFromModel(const QAbstractItemModel *
model);
```

Description

The `QProxyModel::disconnectFromModel()` function shall disconnect from all the signals emitted by the given *model*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine10systemClipEv**Name**

`QPaintEngine::systemClip` — get the system clip

Synopsis

```
#include <QtGui/qpaintengine.h>
QRegion QPaintEngine::systemClip (void);
```

Description

The `QPaintEngine::systemClip()` function shall return the system clip. The system clip is read only while the painter is active. An empty region indicates that system clip is not in use.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine10systemRectEv**Name**

`QPaintEngine::systemRect` — retrieve the rect for drawing within the backing store

Synopsis

```
#include <QtGui/qpaintengine.h>
QRect QPaintEngine::systemRect (void);
```

Description

The `QPaintEngine::systemRect()` function shall retrieve the rectangle for drawing within the backing store.

This function should only be used by the backing store, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine16coordinateOffsetEv**Name**

`QPaintEngine::coordinateOffset` — get the offset from the painters origo to the engines origo

Synopsis

```
#include <QtGui/qpaintengine.h>
virtual QPoint QPaintEngine::coordinateOffset (void);
```

Description

The `QPaintEngine::coordinateOffset()` function shall return the offset from the painters origo to the engines origo. This value is used by `QPainter` for engines who have internal double buffering.

This function only makes sense when the engine is active.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QGraphicsItem17supportsExtensionENS_9ExtensionE**Name**

`QGraphicsItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions.

This function does nothing and should always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QGraphicsItem9extensionERK8QVariant**Name**

`QGraphicsItem::extension` — auxiliary virtual function

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsItem::extension (const QVariant &variant);
```

Description

The `QGraphicsItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

_ZNK13QInputContext11focusWidgetEv**Name**

`QInputContext::focusWidget` — get the widget that has an input focus for this input context

Synopsis

```
#include <QtGui/qinputcontext.h>
QWidget * QInputContext::focusWidget (void);
```

Description

The `QInputContext::focusWidget()` function shall return the widget that has an input focus for this input context.

The return value may differ from `holderWidget()` if the input context is shared between several text widgets.

Ordinary input methods should not call this function directly to keep platform independence and flexible configuration possibility.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

See Also

`setFocusWidget()`, `holderWidget()`

_ZNK13QItemDelegate10decorationERK20QStyleOptionViewItemRK8QVariant**Name**

`QItemDelegate::decoration` — get the pixmap used to decorate the root of the item view

Synopsis

```
#include <QtGui/qitemdelegate.h>
QPixmap QItemDelegate::decoration(const QStyleOptionViewItem & option,
const QVariant & variant);
```

Description

The `QItemDelegate::decoration()` function shall return the pixmap used to decorate the root of the item view.

The style *option* controls the appearance of the root; the *variant* refers to the data associated with an item.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QItemDelegate8selectedERK7QPixmapRK8QPaletteb

Name

`QItemDelegate::selected` — get the selected version of the given pixmap using the given palette

Synopsis

```
#include <QtGui/qitemdelegate.h>
QPixmap * QItemDelegate::selected(const QPixmap & pixmap, const
QPalette & palette, bool enabled);
```

Description

The `QItemDelegate::selected()` function shall return the selected version of the given *pixmap* using the given *palette*.

The *enabled* argument decides whether the normal or disabled highlight color of the palette is used.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QTextDocument7frameAtEi

Name

`QTextDocument::frameAt` — get the frame that contains the given cursor position

Synopsis

```
#include <QtGui/qtextdocument.h>
QTextFrame * QTextDocument::frameAt(int pos);
```

Description

The `QTextDocument::frameAt()` function shall return the frame that contains the text cursor position `pos`.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK14QTextTableCell12lastPositionEv

Name

`QTextTableCell::lastPosition` — get the last position in the cell's document

Synopsis

```
#include <QtGui/qtexttable.h>
int QTextTableCell::lastPosition(void);
```

Description

The `QTextTableCell::lastPosition()` function shall return the last valid position in the document occupied by this cell.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK14QTextTableCell13firstPositionEv

Name

`QTextTableCell::firstPosition` — get the first position in the cell's document

Synopsis

```
#include <QtGui/qtexttable.h>
int QTextTableCell::firstPosition(void);
```

Description

The `QTextTableCell::firstPosition()` function shall return the first valid position in the document occupied by this cell.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsLineItem17supportsExtensionEN13QGraphicsLineItem9ExtensionE**Name**

`QGraphicsLineItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsLineItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsLineItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsLineItem9extensionERK8QVariant**Name**

`QGraphicsLineItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsLineItem::extension(const QVariant &variant);
```

Description

The `QGraphicsLineItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsPathItem17supportsExtensionEN13QGraphicsPathItem9ExtensionE**Name**

`QGraphicsPathItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPathItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsPathItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsPathItem9extensionERK8QVariant

Name

`QGraphicsPathItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPathItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsPathItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsRectItem17supportsExtensionEN13QGraphicsItem9ExtensionE

Name

`QGraphicsRectItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsRectItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsRectItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsRectItem9extensionERK8QVariant**Name**

`QGraphicsRectItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsRectItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsRectItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsTextItem17supportsExtensionEN13QGraphicsItem9ExtensionE**Name**

`QGraphicsTextItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsTextItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsTextItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsTextItem9extensionERK8QVariant**Name**

`QGraphicsTextItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsTextItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsTextItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK19QGraphicsPixmapItem17supportsExtensionEN13QGraphicsItem9ExtensionE

Name

`QGraphicsPixmapItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPixmapItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsPixmapItem::supportsExtension()` is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK19QGraphicsPixmapItem9extensionERK8QVariant

Name

`QGraphicsPixmapItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPixmapItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsPixmapItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsEllipseItem17supportsExtensionEN13QGraphicsItem9ExtensionE**Name**

`QGraphicsEllipseItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsEllipseItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsEllipseItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsEllipseItem9extensionERK8QVariant**Name**

`QGraphicsEllipseItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsEllipseItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsEllipseItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsPolygonItem17supportsExtensionEN13QGraphicsItem9ExtensionE**Name**

`QGraphicsPolygonItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPolygonItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsPolygonItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsPolygonItem9extensionERK8QVariant

Name

`QGraphicsPolygonItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPolygonItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsPolygonItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK23QGraphicsSimpleTextItem17supportsExtensionEN13QGraphicsItem9ExtensionE

Name

`QGraphicsSimpleTextItem::supportsExtension` — check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsSimpleTextItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsSimpleTextItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK23QGraphicsSimpleTextItem9extensionERK8QVariant**Name**

`QGraphicsSimpleTextItem::extension` — get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsSimpleTextItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsSimpleTextItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK6QImage7devTypeEv**Name**

`QImage::devType` — get identifier designating that the object is a `QImage`

Synopsis

```
#include <QtGui/qimage.h>
int QImage::devType(void);
```

Description

The `QImage::devType()` shall always return the `QInternal::Image` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout13totalSizeHintEv**Name**

`QLayout::totalSizeHint` — get the preferred size for the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalSizeHint (void);
```

Description

The `QLayout::totalSizeHint()` function shall return the preferred size of the layout. The result shall be the same as for the `sizeHint()`, but with `contentsMargins` and menu bar taken into account.

Note that all inheritors of the `QLayoutItem` class should provide their own implementation of the `sizeHint()` function.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout16totalMaximumSizeEv**Name**

`QLayout::totalMaximumSize` — get the maximum size of the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalMaximumSize (void);
```

Description

The `QLayout::totalMaximumSize()` function has the same behavior as the `QLayout::maximumSize()` function described in QtGui 4.2.0, but also takes `contentsMargins` and menu bar into account.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout16totalMinimumSizeEv**Name**

`QLayout::totalMinimumSize` — get the minimum size of the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalMinimumSize (void);
```

Description

The `QLayout::totalMinimumSize()` function has the same behavior as the `QLayout::minimumSize()` function described in QtGui 4.2.0, but also takes `contentsMargins` and `menu bar` into account.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout19totalHeightForWidthEi**Name**

`QLayout::totalHeightForWidth` — get the preferred height for the layout

Synopsis

```
#include <QtGui/qlayout.h>
int QLayout::totalHeightForWidth (int w);
```

Description

The `QLayout::totalHeightForWidth()` function has the same behavior as the `QLayoutItem::heightForWidth()` function described in QtGui 4.2.0, but also takes `contentsMargins` and `menu bar` into account (`heightForWidth()` is inherited by `QLayout` from `QLayoutItem`).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QPixmap7devTypeEv**Name**

`QPixmap::devType` — get identifier designating that the object is a QPixmap

Synopsis

```
#include <QtGui/qpixmap.h>
int QPixmap::devType(void);
```

Description

The `QPixmap::devType()` function shall always return the `QInternal::Pixmap` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QWidget7devTypeEv

Name

`QWidget::devType` — get identifier designating that the object is a `QWidget`

Synopsis

```
#include <QtGui/qwidget.h>
int QWidget::devType(void);
```

Description

The `QWidget::devType()` function shall always return the `QInternal::Widget` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar12cornerWidgetEN2Qt6CornerE

Name

`QMenuBar::cornerWidget` — get the widget in the left of the first or the right of the last menu

Synopsis

```
#include <QtGui/qmenubar.h>
QWidget * QMenuBar::cornerWidget(Qt::Corner corner) =
Qt::TopRightCorner);
```

Description

The `QMenuBar::cornerWidget()` function shall return the widget in the left of the first or the right of the last menu item, depending on *corner*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar14actionGeometryEP7QAction**Name**

`QMenuBar::actionGeometry` — get geometry of an action

Synopsis

```
#include <QtGui/qmenubar.h>
QRect QMenuBar::actionGeometry(QAction * act);
```

Description

The `QMenuBar::actionGeometry()` function shall return the geometry of action *act*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar8actionAtERK6QPoint**Name**

`QMenuBar::actionAt` — get the item at the given point

Synopsis

```
#include <QtGui/qmenubar.h>
QAction * QMenuBar::actionAt(const QPoint & pt);
```

Description

The `QMenuBar::actionAt()` function shall return the item at the given point *pt*.

If there is no item there or if it is a separator item then the function shall return 0.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

ZNK8QPainter3mapEiiPiS0**Name**

`QPainter::map` — apply the painter's transformation on the given point

Synopsis

```
#include <QtGui/qpainter.h>
void QPainter::map (int x, int y, int *rx, int *ry);
```

Description

The `QPainter::map()` function shall set (*rx* and *ry*) to the point that results from applying the painter's current transformation on the point (*x*, *y*).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QPicture7devTypeEv**Name**

`QPicture::devType` — get identifier designating that the object is a `QPicture`

Synopsis

```
#include <QtGui/qpicture.h>
int QPicture::devType(void);
```

Description

The `QPicture::devType()` function shall always return the `QInternal::Picture` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QPrinter7devTypeEv**Name**

`QPrinter::devType` — get identifier designating that the object is a `QPrinter`

Synopsis

```
#include <QtGui/qprinter.h>
int QPrinter::devType(void);
```

Description

The `QPrinter::devType()` function shall always return the `QInternal::Printer` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QToolBar14actionGeometryEP7QAction**Name**

`QToolBar::actionGeometry` — get geometry of the toolbar item associated with the given action

Synopsis

```
#include <QtGui/qtoolbar.h>
QRect QToolBar::actionGeometry(QAction * action);
```

Description

The `QToolBar::actionGeometry()` function shall return the geometry of the toolbar item associated with the given *action*.

If no matching item is found, then the function shall return an invalid `QRect`.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo8overlineEv

Name

`QFontInfo::overline` — get the overline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::overline (void);
```

Description

The `QFontInfo::overline()` function shall return the overline value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo9strikeOutEv

Name

`QFontInfo::strikeOut` — get the underline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::strikeOut (void);
```

Description

The `QFontInfo::strikeOut()` function shall return the strikeout value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo9underlineEv

Name

`QFontInfo::underline` — get the underline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::underline (void);
```

Description

The `QFontInfo::underline()` function shall return the underline value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

18.8 Interfaces for libQtXml

Table 18-521 defines the library name and shared object name for the libQtXml library

Table 18-521 libQtXml Definition

Library:	libQtXml
SONAME:	libQtXml.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI
[QtXml] QtXml 4.2.0

18.8.1 Qt4 XML

18.8.1.1 Class data for QXmlAttributes

The virtual table for the `QXmlAttributes` class is described by Table 18-522

Table 18-522 Primary vtable for QXmlAttributes

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for <code>QXmlAttributes</code>
<code>vfunc[0]:</code>	NULL or <code>QXmlAttributes::~~QXmlAttributes()</code>
<code>vfunc[1]:</code>	NULL or <code>QXmlAttributes::~~QXmlAttributes()</code>

18.9 Data Definitions for libQtXml

This section defines global identifiers and their values that are associated with interfaces contained in libQtXml. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.9.1 QtXml/qdom.h

```
class QDomImplementation;
```

```

18.11 Data Definitions for libQtOpenGL

This section defines global identifiers and their values that are associated with interfaces contained in libQtOpenGL. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The

C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.11.1 QtOpenGL/qgl.h

```
enum QGL::FormatOption {
    DoubleBuffer = 1,
    DepthBuffer = 2,
    Rgba = 4,
    AlphaChannel = 8,
    AccumBuffer = 16,
    StencilBuffer = 32,
    StereoBuffers = 64,
    DirectRendering = 128,
    HasOverlay = 256,
    SampleBuffers = 512,
    SingleBuffer = 65536,
    NoDepthBuffer = 131072,
    ColorIndex = 262144,
    NoAlphaChannel = 524288,
    NoAccumBuffer = 1048576,
    NoStencilBuffer = 2097152,
    NoStereoBuffers = 4194304,
    IndirectRendering = 8388608,
    NoOverlay = 16777216,
    NoSampleBuffers = 33554432
};
class QFlags < QGL::FormatOption >;
typedef class QFlags < QGL::FormatOption > QGL::FormatOptions;
class QGLFormat;
class QGLContext;
class QGLWidget;
```

18.11.2 QtOpenGL/qglcolormap.h

```

struct QGLColormap::QGLColormapData;
```

18.11.3 QtOpenGL/qglpixelbuffer.h

```
typedef enum QtValidLicenseForOpenGLModule QtOpenGLModule;
class QGLPixelBuffer;
```

18.12 Interface Definitions for libQtOpenGL

The interfaces defined on the following pages are included in libQtOpenGL and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 18.10 shall behave as described in the referenced base document.

_ZN10QGLContext8setValidEb**Name**

`QGLContext::setValid` — set validity of the GL rendering context

Synopsis

```
#include <QtOpenGL/qgl.h>
void QGLContext::setValid (bool valid);
```

Description

The `QGLContext::setValid()` function shall set validity of the GL rendering context to *validity* (i.e. force the context to be either valid or not valid).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

18.13 Interfaces for libQtSql

Table 18-559 defines the library name and shared object name for the libQtSql library

18.13.1.8 Interfaces for Qt4 SQL

An LSB conforming implementation shall provide the generic functions for Qt4 SQL specified in Table 18-574, with the full mandatory functionality as described in the referenced underlying specification.

18.14 Data Definitions for libQtSql

This section defines global identifiers and their values that are associated with interfaces contained in libQtSql. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.14.1 QSql/qsq.h

```
enum QSql::Location {
    AfterLastRow = -2,
    AfterLast = -2,
    BeforeFirstRow = -1,
    BeforeFirst = -1
};

    BatchOperation = 0
};
```

18.14.13 QSql/qsqltablemodel.h

```
class QSqlTableModel;
enum QSqlTableModel::EditStrategy {
    OnFieldChange = 0,
    OnRowChange = 1,
    OnManualSubmit = 2
};
```

18.15 Interface Definitions for libQtSql

The interfaces defined on the following pages are included in libQtSql and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 18.13 shall behave as described in the referenced base document.

_ZN10QSqlResult9execBatchEb**Name**

`QSqlResult::execBatch` — executes a prepared query in batch mode

Synopsis

```
#include <QtSql/qsqldbresult.h>
bool QSqlResult::execBatch (bool arrayBind);
```

Description

The `QSqlResult::execBatch()` function shall execute a prepared query in batch mode if the driver supports it, otherwise it should emulate a batch execution (for example, using `bindValue()` and `exec()` functions).

The `QSqlDriver::hasFeature()` can be used to find out whether a driver supports batch execution.

Batch execution can be faster for large amounts of data since it reduces network roundtrips.

For batch executions, bound values have to be provided as lists of variants (`QVariantList`). Each list must contain values of the same type. All lists must contain equal amount of values (rows).

NULL values should be passed in as typed `QVariants`, for example `QVariant(QVariant::Int)` should be used for an integer NULL value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QSqlField6typeIDEv**Name**

`QSqlField::typeID` — get the type identifier for the field

Synopsis

```
#include <QtSql/qsqldbfield.h>
int QSqlField::typeID(void);
```

Description

The `QSqlField::typeID()` function shall return the type ID for the field represented by the calling object.

If the returned value is negative, it means that the information is not available from the database.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

18.16 Interfaces for libQtSvg

Table 18-576 defines the library name and shared object name for the libQtSvg library

Table 18-576 libQtSvg Definition

Library:	libQtSvg
SONAME:	libQtSvg.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI

[QtSvg] QtSvg 4.2.0

[QtXml] QtXml 4.2.0

18.17 Data Definitions for libQtSvg

This section defines global identifiers and their values that are associated with interfaces contained in libQtSvg. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.17.1 QtSvg/qsvgrenderer.h

```
class QSvgRenderer;
```

18.17.2 QtSvg/qsvgwidget.h

```
typedef enum QtValidLicenseForSvgModule QtSvgModule;  
class QSvgWidget;
```

18.18 Interfaces for libQtNetwork

Table 18-583 defines the library name and shared object name for the libQtNetwork library

Table 18-583 libQtNetwork Definition

Library:	libQtNetwork
SONAME:	libQtNetwork.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI
 [LSB] This Specification
 [QtNetwork] QtNetwork 4.2.0
 [QtXml] QtXml 4.2.0

18.18.1 Qt4 Network

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 Network specified in Table 18-605, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 18-605 libQtNetwork - Qt4 Network Deprecated Function Interfaces

18.19 Data Definitions for libQtNetwork

This section defines global identifiers and their values that are associated with interfaces contained in libQtNetwork. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

18.20 Interface Definitions for libQtNetwork

The interfaces defined on the following pages are included in libQtNetwork and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 18.18 shall behave as described in the referenced base document.

`_ZN11QHttpHeader5parseERK7QString`

Name

`QHttpHeader::parse` — parse the HTTP header string

Synopsis

```

#include <QtNetwork/qhttp.h>
bool QHttpHeader::parse(const QString & str);

```

Description

The `QHttpHeader::parse()` function shall parse the HTTP header string *str* for header fields and add the keys/values it finds to the header's values.

If the string is not parsed successfully the `QHttpHeader` becomes invalid (that can be checked using the `isValid()` function).

The function shall return true if *str* was successfully parsed; otherwise it shall return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

`toString()`

`_ZN11QHttpHeader9parseLineERK7QStringi`

Name

`QHttpHeader::parseLine` — parse the HTTP header line

Synopsis

```
#include <QtNetwork/qhttp.h>  
bool QHttpHeader::parseLine(const QString & line, int number);
```

Description

The `QHttpHeader::parseLine()` function shall parse the single HTTP header line *line* which has the format "key, colon, space, value", and shall add key/value to the headers. The line number is a *number*.

The function shall return true if the line was successfully parsed and the key/value added; otherwise the function shall return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

XIV ALSA sound library

19 Libraries

19.1 Interfaces for libasound

Table 19-1 defines the library name and shared object name for the libasound library

Table 19-1 libasound Definition

Library:	libasound
SONAME:	libasound.so.2

The behavior of the interfaces in this library is specified by the following specifications:

[ALSA] ALSA Library API Reference

19.1.1 ALSA Configuration Interface

19.1.1.1 Interfaces for ALSA Configuration Interface

An LSB conforming implementation shall provide the generic functions for ALSA Configuration Interface specified in Table 19-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-2 libasound - ALSA Configuration Interface Function Interfaces

snd_config_add(ALSA_0.9) [ALSA]	snd_config_copy(ALSA_0.9) [ALSA]	snd_config_delete(ALSA_0.9) [ALSA]

snd_seq_system_info_copy(ALSA_0.9) [ALSA]	snd_seq_system_info_free(ALSA_0.9) [ALSA]	snd_seq_system_info_get_clients(ALSA_0.9) [ALSA]
snd_seq_system_info_get_ports(ALSA_0.9) [ALSA]	snd_seq_system_info_get_queues(ALSA_0.9) [ALSA]	snd_seq_system_info_malloc(ALSA_0.9) [ALSA]
snd_seq_system_info_sizeof(ALSA_0.9) [ALSA]		

19.1.8 ALSA Mixer Interface

19.1.8.1 Interfaces for ALSA Mixer Interface

An LSB conforming implementation shall provide the generic functions for ALSA Mixer Interface specified in Table 19-10, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-10 libasound - ALSA Mixer Interface Function Interfaces

snd_mixer_attach(ALSA_0.9) [ALSA]	snd_mixer_close(ALSA_0.9) [ALSA]	snd_mixer_detach(ALSA_0.9) [ALSA]
snd_mixer_elem_get_callback_private(ALSA_0.9) [ALSA]	snd_mixer_elem_get_type(ALSA_0.9) [ALSA]	snd_mixer_elem_next(ALSA_0.9) [ALSA]
snd_mixer_elem_prev(ALSA_0.9) [ALSA]	snd_mixer_elem_set_callback(ALSA_0.9) [ALSA]	snd_mixer_elem_set_callback_private(ALSA_0.9) [ALSA]
snd_mixer_first_elem(ALSA_0.9) [ALSA]	snd_mixer_free(ALSA_0.9) [ALSA]	snd_mixer_get_callback_private(ALSA_0.9) [ALSA]
snd_mixer_get_count(ALSA_0.9) [ALSA]	snd_mixer_handle_events(ALSA_0.9) [ALSA]	snd_mixer_last_elem(ALSA_0.9) [ALSA]
snd_mixer_load(ALSA_0.9) [ALSA]	snd_mixer_open(ALSA_0.9) [ALSA]	snd_mixer_poll_descriptors(ALSA_0.9) [ALSA]
snd_mixer_poll_descriptors_count(ALSA_0.9) [ALSA]	snd_mixer_poll_descriptors_revents(ALSA_0.9) [ALSA]	snd_mixer_set_callback(ALSA_0.9) [ALSA]
snd_mixer_set_callback_private(ALSA_0.9) [ALSA]	snd_mixer_wait(ALSA_0.9) [ALSA]	snd_pcm_type_name(ALSA_0.9.0) [ALSA]

19.1.9 ALSA Output Interface

19.1.9.1 Interfaces for ALSA Output Interface

An LSB conforming implementation shall provide the generic functions for ALSA Output Interface specified in Table 19-11, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-11 libasound - ALSA Output Interface Function Interfaces

snd_output_buffer_open(ALSA_0.9) [ALSA]	snd_output_buffer_string(ALSA_0.9) [ALSA]	snd_output_close(ALSA_0.9) [ALSA]

snd_pcm_hw_params_test_channels(ALSA_0.9) [ALSA]	snd_pcm_hw_params_test_format(ALSA_0.9) [ALSA]	snd_pcm_hw_params_test_period_size(ALSA_0.9) [ALSA]
snd_pcm_hw_params_test_period_time(ALSA_0.9) [ALSA]	snd_pcm_hw_params_test_periods(ALSA_0.9) [ALSA]	snd_pcm_hw_params_test_rate(ALSA_0.9) [ALSA]

19.1.17 ALSA PCM Interface - Helper Functions

19.1.17.1 Interfaces for ALSA PCM Interface - Helper Functions

An LSB conforming implementation shall provide the generic functions for ALSA PCM Interface - Helper Functions specified in Table 19-20, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-20 libasound - ALSA PCM Interface - Helper Functions Function Interfaces

snd_pcm_area_copy(ALSA_0.9) [ALSA]	snd_pcm_area_silence(ALSA_0.9) [ALSA]	snd_pcm_areas_copy(ALSA_0.9) [ALSA]
snd_pcm_areas_silence(ALSA_0.9) [ALSA]	snd_pcm_build_linear_format(ALSA_0.9) [ALSA]	snd_pcm_bytes_to_frames(ALSA_0.9) [ALSA]
snd_pcm_bytes_to_samples(ALSA_0.9) [ALSA]	snd_pcm_format_big_endian(ALSA_0.9) [ALSA]	snd_pcm_format_cpu_endian(ALSA_0.9) [ALSA]
snd_pcm_format_float(ALSA_0.9) [ALSA]	snd_pcm_format_linear(ALSA_0.9) [ALSA]	snd_pcm_format_little_endian(ALSA_0.9) [ALSA]
snd_pcm_format_physical_width(ALSA_0.9) [ALSA]	snd_pcm_format_set_silence(ALSA_0.9) [ALSA]	snd_pcm_format_signed(ALSA_0.9) [ALSA]
snd_pcm_format_size(ALSA_0.9) [ALSA]	snd_pcm_format_unsigned(ALSA_0.9) [ALSA]	snd_pcm_format_width(ALSA_0.9) [ALSA]
snd_pcm_frames_to_bytes(ALSA_0.9) [ALSA]	snd_pcm_samples_to_bytes(ALSA_0.9) [ALSA]	

19.1.18 ALSA PCM Interface - Software Parameters

19.1.18.1 Interfaces for ALSA PCM Interface - Software Parameters

An LSB conforming implementation shall provide the generic functions for ALSA PCM Interface - Software Parameters specified in Table 19-21, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-21 libasound - ALSA PCM Interface - Software Parameters Function Interfaces

snd_pcm_sw_params_copy(ALSA_0.9) [ALSA]	snd_pcm_sw_params_free(ALSA_0.9) [ALSA]	snd_pcm_sw_params_get_avail_min(ALSA_0.9.0rc4) [ALSA]
snd_pcm_sw_params_get_boundary(ALSA_0.9) [ALSA]	snd_pcm_sw_params_get_silence_size(ALSA_0.9.0rc4) [ALSA]	snd_pcm_sw_params_get_silence_threshold(ALSA_0.9.0rc4) [ALSA]

snd_pcm_sw_params_get_start_threshold(ALSA_0.9.0rc4) [ALSA]	snd_pcm_sw_params_get_stop_threshold(ALSA_0.9.0rc4) [ALSA]	snd_pcm_sw_params_get_tstamp_mode(ALSA_0.9.0rc4) [ALSA]
snd_pcm_sw_params_malloc(ALSA_0.9) [ALSA]	snd_pcm_sw_params_set_avail_min(ALSA_0.9) [ALSA]	snd_pcm_sw_params_set_silence_size(ALSA_0.9) [ALSA]
snd_pcm_sw_params_set_silence_threshold(ALSA_0.9) [ALSA]	snd_pcm_sw_params_set_start_threshold(ALSA_0.9) [ALSA]	snd_pcm_sw_params_set_stop_threshold(ALSA_0.9) [ALSA]
snd_pcm_sw_params_set_tstamp_mode(ALSA_0.9) [ALSA]	snd_pcm_sw_params_set_xfer_align(ALSA_0.9) [ALSA]	snd_pcm_sw_params_sizeof(ALSA_0.9) [ALSA]

An LSB conforming implementation shall provide the generic deprecated functions for ALSA PCM Interface - Software Parameters specified in Table 19-22, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

**Table 19-22 libasound - ALSA PCM Interface - Software Parameters
Deprecated Function Interfaces**

snd_pcm_sw_params_set_xfer_align(ALSA_0.9) [ALSA]		
---	--	--

19.1.19 ALSA PCM Interface - Status Functions

19.1.19.1 Interfaces for ALSA PCM Interface - Status Functions

An LSB conforming implementation shall provide the generic functions for ALSA PCM Interface - Status Functions specified in Table 19-23, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-23 libasound - ALSA PCM Interface - Status Functions Function Interfaces

snd_pcm_status_copy(ALSA_0.9) [ALSA]	snd_pcm_status_free(ALSA_0.9) [ALSA]	snd_pcm_status_get_avail(ALSA_0.9) [ALSA]
snd_pcm_status_get_avail_max(ALSA_0.9) [ALSA]	snd_pcm_status_get_delay(ALSA_0.9) [ALSA]	snd_pcm_status_get_state(ALSA_0.9) [ALSA]
snd_pcm_status_get_trigger_tstamp(ALSA_0.9) [ALSA]	snd_pcm_status_get_tstamp(ALSA_0.9) [ALSA]	snd_pcm_status_malloc(ALSA_0.9) [ALSA]
snd_pcm_status_sizeof(ALSA_0.9) [ALSA]		

19.1.20 ALSA PCM Interface - Stream Information

19.1.20.1 Interfaces for ALSA PCM Interface - Stream Information

An LSB conforming implementation shall provide the generic functions for ALSA PCM Interface - Stream Information specified in Table 19-24, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-24 libasound - ALSA PCM Interface - Stream Information Function Interfaces

snd_pcm_info_copy(ALSA_0.9) [ALSA]	snd_pcm_info_free(ALSA_0.9) [ALSA]	snd_pcm_info_get_card(ALSA_0.9) [ALSA]
snd_pcm_info_get_class(ALSA_0.9) [ALSA]	snd_pcm_info_get_device(ALSA_0.9) [ALSA]	snd_pcm_info_get_id(ALSA_0.9) [ALSA]
snd_pcm_info_get_name(ALSA_0.9) [ALSA]	snd_pcm_info_get_stream(ALSA_0.9) [ALSA]	snd_pcm_info_get_subdevice(ALSA_0.9) [ALSA]
snd_pcm_info_get_subdevice_name(ALSA_0.9) [ALSA]	snd_pcm_info_get_subdevices_avail(ALSA_0.9) [ALSA]	snd_pcm_info_get_subdevices_count(ALSA_0.9) [ALSA]
snd_pcm_info_malloc(ALSA_0.9) [ALSA]	snd_pcm_info_set_device(ALSA_0.9) [ALSA]	snd_pcm_info_set_stream(ALSA_0.9) [ALSA]
snd_pcm_info_set_subdevice(ALSA_0.9) [ALSA]	snd_pcm_info_sizeof(ALSA_0.9) [ALSA]	

19.1.21 ALSA Sequencer Event Type Checks

19.1.21.1 Interfaces for ALSA Sequencer Event Type Checks

No external functions are defined for libasound - ALSA Sequencer Event Type Checks in this part of the specification. See also the relevant architecture specific part of this specification.

An LSB conforming implementation shall provide the generic data interfaces for ALSA Sequencer Event Type Checks specified in Table 19-25, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-25 libasound - ALSA Sequencer Event Type Checks Data Interfaces

snd_seq_event_types(ALSA_0.9) [ALSA]		
--------------------------------------	--	--

19.1.22 ALSA Error Handling

19.1.22.1 Interfaces for ALSA Error Handling

An LSB conforming implementation shall provide the generic functions for ALSA Error Handling specified in Table 19-26, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-26 libasound - ALSA Error Handling Function Interfaces

snd_lib_error_set_handler(ALSA_0.9) [ALSA]	snd_strerror(ALSA_0.9) [ALSA]	
--	-------------------------------	--

19.1.23 ALSA RawMidi Interface

19.1.23.1 Interfaces for ALSA RawMidi Interface

An LSB conforming implementation shall provide the generic functions for ALSA RawMidi Interface specified in Table 19-27, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-27 libasound - ALSA RawMidi Interface Function Interfaces

snd_rawmidi_close(ALSA_0.9) [ALSA]	snd_rawmidi_drain(ALSA_0.9) [ALSA]	snd_rawmidi_drop(ALSA_0.9) [ALSA]
snd_rawmidi_info(ALSA_0.9) [ALSA]	snd_rawmidi_info_copy(ALSA_0.9) [ALSA]	snd_rawmidi_info_free(ALSA_0.9) [ALSA]
snd_rawmidi_info_get_card(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_device(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_flags(ALSA_0.9) [ALSA]
snd_rawmidi_info_get_id(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_name(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_stream(ALSA_0.9) [ALSA]
snd_rawmidi_info_get_subdevice(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_subdevice_name(ALSA_0.9) [ALSA]	snd_rawmidi_info_get_subdevices_avail(ALSA_0.9) [ALSA]
snd_rawmidi_info_get_subdevices_count(ALSA_0.9) [ALSA]	snd_rawmidi_info_mall oc(ALSA_0.9) [ALSA]	snd_rawmidi_info_set_device(ALSA_0.9) [ALSA]
snd_rawmidi_info_set_stream(ALSA_0.9) [ALSA]	snd_rawmidi_info_set_subdevice(ALSA_0.9) [ALSA]	snd_rawmidi_info_size of(ALSA_0.9) [ALSA]
snd_rawmidi_nonblock(ALSA_0.9) [ALSA]	snd_rawmidi_open(ALSA_0.9) [ALSA]	snd_rawmidi_poll_descriptors(ALSA_0.9) [ALSA]
snd_rawmidi_poll_descriptors_count(ALSA_0.9) [ALSA]	snd_rawmidi_poll_descriptors_revents(ALSA_0.9) [ALSA]	snd_rawmidi_read(ALSA_0.9) [ALSA]
snd_rawmidi_write(ALSA_0.9) [ALSA]		

19.1.24 ALSA Sequencer Client Interface

19.1.24.1 Interfaces for ALSA Sequencer Client Interface

An LSB conforming implementation shall provide the generic functions for ALSA Sequencer Client Interface specified in Table 19-28, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-28 libasound - ALSA Sequencer Client Interface Function Interfaces

snd_seq_client_info_copy(ALSA_0.9) [ALSA]	snd_seq_client_info_free(ALSA_0.9) [ALSA]	snd_seq_client_info_get_client(ALSA_0.9) [ALSA]
snd_seq_client_info_get_name(ALSA_0.9) [ALSA]	snd_seq_client_info_get_num_ports(ALSA_0.9) [ALSA]	snd_seq_client_info_get_type(ALSA_0.9) [ALSA]
snd_seq_client_info_malloc(ALSA_0.9) [ALSA]	snd_seq_client_info_set_client(ALSA_0.9) [ALSA]	snd_seq_client_info_set_name(ALSA_0.9) [ALSA]
snd_seq_client_info_sizeof(ALSA_0.9) [ALSA]	snd_seq_get_any_client_info(ALSA_0.9) [ALSA]	snd_seq_get_client_info(ALSA_0.9) [ALSA]
snd_seq_query_next_client(ALSA_0.9) [ALSA]	snd_seq_set_client_info(ALSA_0.9) [ALSA]	

19.1.25 ALSA Sequencer Event API

19.1.25.1 Interfaces for ALSA Sequencer Event API

An LSB conforming implementation shall provide the generic functions for ALSA Sequencer Event API specified in Table 19-29, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-29 libasound - ALSA Sequencer Event API Function Interfaces

snd_seq_drain_output(ALSA_0.9) [ALSA]	snd_seq_drop_output(ALSA_0.9) [ALSA]	snd_seq_drop_output_buffer(ALSA_0.9) [ALSA]
snd_seq_event_input(ALSA_0.9) [ALSA]	snd_seq_event_input_pending(ALSA_0.9) [ALSA]	snd_seq_event_length(ALSA_0.9) [ALSA]
snd_seq_event_output(ALSA_0.9) [ALSA]	snd_seq_event_output_direct(ALSA_0.9) [ALSA]	snd_seq_free_event(ALSA_0.9) [ALSA]

An LSB conforming implementation shall provide the generic deprecated functions for ALSA Sequencer Event API specified in Table 19-30, with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 19-30 libasound - ALSA Sequencer Event API Deprecated Function Interfaces

snd_seq_free_event(ALSA_0.9) [ALSA]		
-------------------------------------	--	--

19.1.26 ALSA Sequencer Middle Level Interface

19.1.26.1 Interfaces for ALSA Sequencer Middle Level Interface

An LSB conforming implementation shall provide the generic functions for ALSA Sequencer Middle Level Interface specified in Table 19-31, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-31 libasound - ALSA Sequencer Middle Level Interface Function Interfaces

snd_seq_connect_from(ALSA_0.9) [ALSA]	snd_seq_connect_to(ALSA_0.9) [ALSA]	snd_seq_control_queue(ALSA_0.9) [ALSA]
snd_seq_create_simple_port(ALSA_0.9) [ALSA]	snd_seq_delete_simple_port(ALSA_0.9) [ALSA]	snd_seq_disconnect_from(ALSA_0.9) [ALSA]
snd_seq_disconnect_to(ALSA_0.9) [ALSA]	snd_seq_parse_address(ALSA_0.9) [ALSA]	snd_seq_set_client_name(ALSA_0.9) [ALSA]
snd_seq_sync_output_queue(ALSA_0.9) [ALSA]		

19.1.27 ALSA Sequencer Port Interface

19.1.27.1 Interfaces for ALSA Sequencer Port Interface

An LSB conforming implementation shall provide the generic functions for ALSA Sequencer Port Interface specified in Table 19-32, with the full mandatory functionality as described in the referenced underlying specification.

Table 19-32 libasound - ALSA Sequencer Port Interface Function Interfaces

snd_seq_create_port(ALSA_0.9) [ALSA]	snd_seq_delete_port(ALSA_0.9) [ALSA]	snd_seq_get_any_port_info(ALSA_0.9) [ALSA]

snd_timer_stop(ALSA_0.9) [ALSA]		

19.2 Data Definitions for libasound

This section defines global identifiers and their values that are associated with interfaces contained in libasound. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

XV Desktop Environment

20 Desktop Environment

20.1 Desktop Base Directory

Various specifications specify files and file formats. The Base Directory Spec defines where these files should be looked for by defining one or more base directories relative to which files should be located.

20.2 Desktop Entries

The Desktop Entry Spec describes desktop entries: files describing information about an application such as the name, icon, and description. These files are used for application launchers and for creating menus of applications that can be launched.

20.3 Desktop Menu Specification

The Desktop Menu Spec defines how to construct a user-visible hierarchy of applications, typically displayed as a menu. It allows third-party software to add menu items that work for all desktops, and allows system administrators to edit menus in a way that affects all desktops.

20.4 Icon Theme Specification

The Icon Theme Spec defines Icon Themes - a set of icons that share a common look and feel. It defines the required directory layout, the format of the icon theme description file and the icon data files, and the icon lookup mechanism.

21 Desktop Commands

21.1 Xdg-utils

Xdg-utils is a set of command line utilities that assist applications with a variety of desktop integration tasks. Some of the utilities focus on tasks commonly required during the installation of a desktop application. The remainder focus on integration with the desktop environment while the application is running.

These utilities operate as described at xdg-utils reference

21.1.1 Xdg-utils Commands

An LSB conforming implementation shall provide the commands and utilities as described in Table 21-1, with at least the behavior described as mandatory in the referenced underlying specification, with the following exceptions:

1. If any operand (except one which follows --) starts with a hyphen, the behavior is unspecified.

Rationale (Informative): Applications should place options before operands, or use --, as needed. This text is needed because, by default, GNU option parsing differs from POSIX, unless the environment variable POSIXLY_CORRECT is set. For example, **ls . -a** in GNU **ls** means to list the current directory, showing all files (that is, "." is an operand and -a is an option). In POSIX, "." and -a are both operands, and the command means to list the current directory, and also the file named -a. Suggesting that applications rely on the setting of the POSIXLY_CORRECT environment variable, or try to set it, seems worse than just asking the applications to invoke commands in ways which work with either the POSIX or GNU behaviors.

Table 21-1 Commands And Utilities

XVI Package Format and Installation

22 Software Installation

22.1 Package Dependencies

The LSB runtime environment shall provide the following dependencies.

`lsb-desktop`

This dependency is used to indicate that the application is dependent on features contained in the LSB Desktop module specification.

`lsb-desktop-arch`

This dependency is used to indicate that the application is dependent on features contained in the LSB Desktop module and that the package contains architecture specific features. This architecture specific dependency is described in the relevant architecture specific part of the LSB Desktop specification.

`lsb-desktop-noarch`

This dependency is used to indicate that the application is dependent on features contained in the LSB Desktop module and that the package does not contain any architecture specific features.

These dependencies shall have a version of 5.0.

Annex A Alphabetical Listing of Interfaces by Library

A.1 libGL

The behavior of the interfaces in this library is specified by the following Standards.

XftDrawSetClip[LSB]	XftGlyphExtents[LSB]	

A.8 libXi

The behavior of the interfaces in this library is specified by the following Standards.

X11 Input Library [XINPUT]

Table A-8 libXi Function Interfaces

XAllowDeviceEvents[XINPUT]	XGetDeviceButtonMapping[XINPUT]	XOpenDevice[XINPUT]
XChangeDeviceControl[XINPUT]	XGetDeviceControl[XINPUT]	XQueryDeviceState[XINPUT]
XChangeDeviceDontPropagateList[XINPUT]	XGetDeviceDontPropagateList[XINPUT]	XSelectExtensionEvent[XINPUT]
XChangeDeviceKeyMapping[XINPUT]	XGetDeviceFocus[XINPUT]	XSendExtensionEvent[XINPUT]
XChangeFeedbackControl[XINPUT]	XGetDeviceKeyMapping[XINPUT]	XSetDeviceButtonMapping[XINPUT]
XChangeKeyboardDevice[XINPUT]	XGetDeviceModifierMapping[XINPUT]	XSetDeviceFocus[XINPUT]
XChangePointerDevice[XINPUT]	XGetDeviceMotionEvents[XINPUT]	XSetDeviceMode[XINPUT]
XCloseDevice[XINPUT]	XGetExtensionVersion[XINPUT]	XSetDeviceModifierMapping[XINPUT]

XDeviceBell[XINPUT]	XGetFeedbackControl[XINPUT]	XSetDeviceValuators[XINPUT]
XFreeDeviceControl[XINPUT]	XGetSelectedExtensionEvents[XINPUT]	XUngrabDevice[XINPUT]
XFreeDeviceList[XINPUT]	XGrabDevice[XINPUT]	XUngrabDeviceButton[XINPUT]
XFreeDeviceMotionEvents[XINPUT]	XGrabDeviceButton[XINPUT]	XUngrabDeviceKey[XINPUT]
XFreeDeviceState[XINPUT]	XGrabDeviceKey[XINPUT]	
XFreeFeedbackList[XINPUT]	XListInputDevices[XINPUT]	

A.9 libXrender

The behavior of the interfaces in this library is specified by the following Standards.

This Specification [LSB]

Table A-9 libXrender Function Interfaces

XRenderAddGlyphs[LSB]	XRenderCreateAnimCursor[LSB]	XRenderFreePicture[LSB]
XRenderAddTraps[LSB]	XRenderCreateConicalGradient[LSB]	XRenderParseColor[LSB]
XRenderChangePicture[LSB]	XRenderCreateCursor[LSB]	XRenderQueryExtension[LSB]
XRenderComposite[LSB]	XRenderCreateGlyphSet[LSB]	XRenderQueryFilters[LSB]
XRenderCompositeDoublePoly[LSB]	XRenderCreateLinearGradient[LSB]	XRenderQueryFormats[LSB]
XRenderCompositeString16[LSB]	XRenderCreatePicture[LSB]	XRenderQueryPictureIndexValues[LSB]
XRenderCompositeString32[LSB]	XRenderCreateRadialGradient[LSB]	XRenderQuerySubpixelOrder[LSB]
XRenderCompositeString8[LSB]	XRenderCreateSolidFill[LSB]	XRenderQueryVersion[LSB]
XRenderCompositeText16[LSB]	XRenderFillRectangle[LSB]	XRenderReferenceGlyphSet[LSB]
XRenderCompositeText32[LSB]	XRenderFillRectangles[LSB]	XRenderSetPictureClipRectangles[LSB]
XRenderCompositeText8[LSB]	XRenderFindFormat[LSB]	XRenderSetPictureClipRegion[LSB]
XRenderCompositeTrapezoids[LSB]	XRenderFindStandardFormat[LSB]	XRenderSetPictureFilter[LSB]

XRenderCompositeTriFan[LSB]	XRenderFindVisualFormat[LSB]	XRenderSetPictureTransform[LSB]
XRenderCompositeTriStrip[LSB]	XRenderFreeGlyphSet[LSB]	XRenderSetSubpixelOrder[LSB]
XRenderCompositeTriangles[LSB]	XRenderFreeGlyphs[LSB]	

A.10 libXt

The behavior of the interfaces in this library is specified by the following Standards.

This Specification [LSB]

X11 Toolkit Intrinsics [Xt]

Table A-10 libXt Function Interfaces

XtAddActions[Xt]	XtCvtStringToInitialState[Xt]	XtOwnSelectionIncremental[Xt]

A.26 libglib-2.0

The behavior of the interfaces in this library is specified by the following Standards.

Glib 2.32 Reference Manual [Glib 2.32]

Gobject 2.32 Reference Manual [Gobject 2.32]

This Specification [LSB]

A.37 libQtNetwork

The behavior of the interfaces in this library is specified by the following Standards.

Itanium™ C++ ABI [CXXABI-1.86]

This Specification [LSB]

QtNetwork 4.2.0 [QtNetwork]

QtXml 4.2.0 [QtXml]

A.38 libQtOpenGL

The behavior of the interfaces in this library is specified by the following Standards.

Itanium™ C++ ABI [CXXABI-1.86]

This Specification [LSB]

QtOpenGL 4.2.0 [QtOpenGL]

QtXml 4.2.0 [QtXml]

A.39 libQtSql

The behavior of the interfaces in this library is specified by the following Standards.

Itanium™ C++ ABI [CXXABI-1.86]

This Specification [LSB]

QtSql 4.2.0 [QtSql]

QtXml 4.2.0 [QtXml]
