## CONTENTS

|   |    |
|---|----|
| FOREWORD.....   | 6  |
| INTRODUCTION.....   | 8  |
| 1 Scope.....  | 9  |
| 2 Normative references .....  | 9  |
| 3 Terms and definitions .....   | 9  |
| 4 General .....   | 11 |
| 5 Test levels.....  | 13 |
| 6 Test equipment and level adjustment procedure .....   | 15 |
| 6.1 Test generator .....  | 15 |
| 6.2 Coupling and decoupling devices.....  | 16 |
| 6.2.1 General .....   | 16 |
| 6.2.2 Coupling/decoupling networks (CDNs).....  | 18 |
| 6.2.3 Clamp injection devices .....   | 20 |
| 6.2.4 Direct injection devices.....   | 22 |
| 6.2.5 Decoupling networks .....   | 22 |
| 6.3 Verification of the common-mode impedance at the EUT port of coupling and<br>decoupling devices ..... | 22 |
| 6.3.1 General .....   | 22 |
| 6.3.2 Insertion loss of the 150 Ω to 50 Ω adapters .....  | 23 |
| 6.4 Setting of the test generator.....  | 25 |
| 6.4.1 General .....   | 25 |
| 6.4.2 Setting of the output level at the EUT port of the coupling device .....                            | 25 |
| 7 Test setup and injection methods .....  | 27 |
| 7.1 Test setup.....   | 27 |
| 7.2 EUT comprising a single unit.....   | 28 |
| 7.3 EUT comprising several units.....   | 30 |
| 7.4 Rules for selecting injection methods and test points .....   | 31 |
| 7.4.1 General .....   | 31 |
| 7.4.2 Injection method .....  | 31 |
| 7.4.3 Ports to be tested .....  | 32 |
| 7.5 CDN injection application .....   | 32 |
| 7.6 Clamp injection application .....   | 34 |
| 7.7 Direct injection application .....  | 36 |
| 8 Test procedure .....  | 36 |
| 9 Evaluation of the test results .....  | 37 |
| 10 Test report.....   | 38 |
| Annex A (normative) EM and decoupling clamps.....   | 39 |
| A.1 EM clamps .....   | 39 |
| A.1.1 General .....   | 39 |
| A.1.2 Specification of EM clamps.....   | 39 |
| A.2 EM clamp characterization .....   | 41 |
| A.2.1 Specification of the clamp test jig .....   | 41 |
| A.2.2 Clamp characterization .....  | 42 |
| A.3 Decoupling clamp characterization.....  | 47 |
| A.3.1 General .....   | 47 |
| A.3.2 Specification of decoupling clamps .....  | 47 |

|  |  |    |
|--|--|----|
| A.3.3  | Impedance.....   | 47 |
| A.3.4  | Decoupling factor.....   | 48 |
| Annex B (informative)  | Selection criteria for the frequency range of application .....                | 50 |
| Annex C (informative)  | Guidelines for selecting test levels .....                                     | 52 |
| Annex D (informative)  | Information on coupling and decoupling networks .....                          | 53 |
| D.1  | Basic features of the coupling and decoupling networks.....                    | 53 |
| D.2  | Examples of coupling and decoupling networks .....                             | 53 |
| Annex E (informative)  | Information for the test generator specification.....                          | 58 |
| Annex F (informative)  | Test setup for large EUTs.....   | 59 |
| F.1  | General.....   | 59 |
| F.2  | Test setup for large EUTs .....  | 59 |
| Annex G (informative)  | Measurement uncertainty of the voltage test level.....                         | 62 |
| G.1  | General.....   | 62 |
| G.2  | General symbols.....   | 62 |
| G.3  | Uncertainty budgets for test methods .....                                     | 62 |
| G.3.1  | Definition of the measurand.....   | 62 |
| G.3.2  | MU contributors of the measurand .....   | 63 |
| G.3.3  | Input quantities and calculation examples for expanded uncertainty .....       | 64 |
| G.4  | Expression of the calculated measurement uncertainty and its application ..... | 71 |
| Annex H (informative)  | Testing with multiple signals .....  | 73 |
| H.1  | General.....   | 73 |
| H.2  | Intermodulation.....   | 73 |
| H.3  | Power requirements .....   | 74 |
| H.4  | Level-setting requirements.....  | 75 |
| H.5  | Linearity check and harmonics checks of the test generator.....                | 75 |
| H.6  | EUT performance criteria with multiple signals.....                            | 75 |
| Annex I (informative)  | Port-to-port injection.....  | 76 |
| I.1  | General.....   | 76 |
| I.2  | Test setup for injection on identical ports .....                              | 76 |
| I.2.1  | Selection of ports.....  | 76 |
| I.2.2  | Procedure for port-to-port injection .....                                     | 76 |
| Annex J (informative)  | Amplifier compression and non-linearity.....                                   | 78 |
| J.1  | Objective of limiting amplifier distortion.....                                | 78 |
| J.2  | Possible problems caused by harmonics and saturation.....                      | 78 |
| J.3  | Limiting the harmonic content in the disturbance signal.....                   | 78 |
| J.4  | Effect of linearity characteristic on the immunity test.....                   | 79 |
| J.4.1  | General .....  | 79 |
| J.4.2  | Evaluation of the amplifier linearity characteristic .....                     | 79 |
| Bibliography.....  |  | 83 |

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTROMAGNETIC COMPATIBILITY (EMC) –****Part 4-6: Testing and measurement techniques –  
Immunity to conducted disturbances, induced by radio-frequency fields**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61000-4-6 has been prepared by subcommittee 77B: High frequency phenomena, of IEC technical committee 77: Electromagnetic compatibility. It is an International Standard.

It forms Part 4-6 of IEC 61000. It has the status of a basic EMC publication in accordance with IEC Guide 107.

This fifth edition cancels and replaces the fourth edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) selection of injection devices revised;
- b) need of AE impedance check for clamp injection removed and Annex H deleted;
- c) saturation check revised;
- d) new Annex H on testing with multiple signals;

e) level-setting only with feedback loop.

The text of this International Standard is based on the following documents:

| Draft        | Report on voting |
|--------------|------------------|
| 77B/863/FDIS | 77B/865/RVD      |

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts in the IEC 61000 series, published under the general title *Electromagnetic compatibility (EMC)*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

IEC 61000 is published in separate parts according to the following structure:

### Part 1: General

General considerations (introduction, fundamental principles)

Definitions, terminology

### Part 2: Environment

Description of the environment

Classification of the environment

Compatibility levels

### Part 3: Limits

Emission limits

Immunity limits (in so far as they do not fall under the responsibility of the product committees)

### Part 4: Testing and measurement techniques

Measurement techniques

Testing techniques

### Part 5: Installation and mitigation guidelines

Installation guidelines

Mitigation methods and devices

### Part 6: Generic standards

### Part 9: Miscellaneous

Each part is further subdivided into several parts, published either as international standards or as technical specifications or technical reports, some of which have already been published as sections. Others will be published with the part number followed by a dash and a second number identifying the subdivision (example: IEC 61000-6-1).

This part is an international standard which gives immunity requirements and test procedures related to conducted disturbances induced by radio-frequency fields.

## **ELECTROMAGNETIC COMPATIBILITY (EMC) –**

### **Part 4-6: Testing and measurement techniques – Immunity to conducted disturbances, induced by radio-frequency fields**

#### **1 Scope**

This part of IEC 61000 relates to the conducted immunity requirements of electrical and electronic equipment to electromagnetic disturbances coming from intended radio-frequency (RF) transmitters in the frequency range 150 kHz up to 80 MHz.

NOTE 1 Product committees might decide to use the methods described in this document also for frequencies up to 230 MHz (see Annex B) although the methods and test instrumentation are intended to be used in the frequency range up to 80 MHz.

Equipment not having at least one conducting wire or cable (such as mains supply, signal line or earth connection) which can couple the equipment to the disturbing RF fields is excluded from the scope of this document.

NOTE 2 Test methods are specified in this part of IEC 61000 to assess the effect that conducted disturbing signals, induced by electromagnetic radiation, have on the equipment concerned. The simulation and measurement of these conducted disturbances are not adequately exact for the quantitative determination of effects. The test methods specified are structured for the primary objective of establishing adequate repeatability of results at various facilities for quantitative analysis of effects.

The object of this document is to establish a common reference for evaluating the functional immunity of electrical and electronic equipment when subjected to conducted disturbances induced by RF fields. The test method in this document describes a consistent method to assess the immunity of an equipment or system against a specified phenomenon.

NOTE 3 As described in IEC Guide 107, this document is a basic EMC publication for use by product committees of the IEC. As also stated in Guide 107, the IEC product committees are responsible for determining whether this immunity test standard should be applied or not, and if applied, they are responsible for determining the appropriate test levels and performance criteria.

#### **2 Normative references**

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
