INTERNATIONAL ELECTROTECHNICAL COMMISSION

FUNCTIONAL PERFORMANCE CRITERIA FOR AAL ROBOTS USED IN THE CONNECTED HOME ENVIRONMENT

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63310 has been prepared by IEC SyC AAL: Systems Committee on Active Assisted Living. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
SyCAAL/375/FDIS	SyCAAL/379/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

INTRODUCTION

The purpose of this document is to consider the needs and characteristics of an active assisted living (AAL) user and to integrate these into the development, design and evaluation of an AAL robot for use in the connected home environment (CHE).

With the increase of the global population aging, it is going to be increasingly difficult for family members or healthcare workers to adequately undertake home care duty. Personal service robots could be an option for addressing the resulting bottleneck in daily life and health care by supporting the independent living of the AAL user in their connected home environment. From a market perspective, global sales of robots have been increasing in recent years and this is expected to continue in the future. More and more autonomous robotic systems have been used widely by consumers in the home environment, especially in the AAL connected home environment (CHE). However, the gap analysis of standards shows that the current robots' functional performance standards do not focus on the characteristics and needs of the AAL user.

It is within the scope and responsibility of IEC SyC AAL to consider the needs and characteristics of the AAL user and to integrate these into AAL standardization work.

This document will make it possible to recognize and define AAL robots' function and performance and specific technical requirements in the CHE. This document will provide criteria and guidelines for the products design, testing and certification, and help to improve the quality of the robot products. AAL robots can be subject to additional relevant regulations and standards.

As a result, by providing AAL robots to the market that are in accordance with this document, the following benefits will be achieved:

- assist the AAL users (including AAL care recipients) to live more independently in their homes;
- increase AAL robots' market acceptance;
- facilitate AAL robots' industry scale acceptance.

FUNCTIONAL PERFORMANCE CRITERIA FOR AAL ROBOTS USED IN THE CONNECTED HOME ENVIRONMENT

1 Scope

This document deals with the functional performance criteria and guidelines for robots intended for use in the active assisted living connected home environment (AAL CHE).

This document does not cover safety requirements of robots.

This document is applicable to robots which provide the AAL user (or AAL care recipient) with one or more of the following services and support in the AAL CHE:

- information and data management;
- monitoring service;
- communication support;
- activity support;
- mobility support;
- other support.

AAL robots can be subject to additional relevant regulations and standards.

This document is not applicable to robots used for medical purposes.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
