## CONTENTS

FOREWORD.....	3
INTRODUCTION.....	5
1 Scope.....	6
2 Normative references.....	6
3 Terms and definitions .....	6
4 Principal guidelines .....	9
4.1 Adaptation to the needs for the system or product.....	9
4.2 Adaptation to the structure of the publication .....	9
5 Requirements to be covered .....	10
5.1 Information requirements.....	10
5.2 Documentation requirements .....	11
5.2.1 General .....	11
5.2.2 Structuring of the documentation .....	12
5.2.3 Identification and classification.....	13
5.2.4 Document kinds, their purpose and preparation .....	15
5.2.5 Graphical symbols .....	15
5.2.6 Characteristic properties and data element types.....	16
5.3 Requirements on documentation generated by tools other than CAx tools .....	17
Annex A (informative) Example of a clause specifying documentation requirements for a complex system or product.....	18
A.1 Technical documentation.....	18
A.2 Information to be provided.....	18
A.3 Requirements for documents and documentation .....	19
A.3.1 General requirements.....	19
A.3.2 Main document .....	19
A.3.3 Labelling.....	20
A.4 Specific requirements for certain kinds of information.....	20
A.4.1 Information on installation and mounting.....	20
A.4.2 Information on factory and site testing .....	20
A.4.3 Information on function and operation.....	20
A.4.4 Information on maintenance .....	20
A.4.5 Information on disassembly, recycling and disposal .....	20
Annex B (informative) Example of a clause specifying documentation requirements for a simple (consumer) product.....	21
B.1 Technical documentation.....	21
B.2 Information to be provided.....	21
B.3 Requirements for documents and documentation .....	22
B.3.1 General requirements.....	22
B.3.2 Labelling.....	22
B.3.3 Specific requirements for some kinds of information.....	22
Bibliography .....	24

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**GUIDELINES FOR THE INCLUSION OF DOCUMENTATION  
ASPECTS IN PRODUCT STANDARDS**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC 62666, which is a technical specification, has been prepared by IEC technical committee 3: Information structures and elements, identification and marking principles, documentation and graphical symbols.

This second edition cancels and replaces the first edition published in 2010. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) the references to relevant standards have been updated and horizontal standards have been designated;
- b) a new subclause "Identification of equipment, basic and safety principles" has been added. The reason for this is that a group of standards have been placed under the responsibility of TC 3.

The text of this technical specification is based on the following documents:

Enquiry draft	Report on voting
3/1256/DTS	3/1261/RVC

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- transformed into an International standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

## INTRODUCTION

This Technical Specification is developed in response to expressed needs for guidelines on requirements for documentation in product and system standards.

This document is written for the target group Product Committee Secretaries, PT- and MT-members, etc. It provides some basic information on documentation principles, explanations and justifications to why the references to documentation standards should be made. It is assumed that experts developing product standards have not necessarily relevant documentation aspects as their primary interest. As a consequence, the text may by some be found too “educational” for a standard. In a guideline it may, however, be more appropriate.

The two annexes are examples intended to be used as templates for how texts should be included in product standards.

## **GUIDELINES FOR THE INCLUSION OF DOCUMENTATION ASPECTS IN PRODUCT STANDARDS**

### **1 Scope**

This Technical Specification provides guidelines to ensure consistency with respect to the specification of requirements for information, documentation and graphical symbols in IEC publications provided by system or product committees.

NOTE 1 Guidelines regarding inclusion of graphical symbols on equipment are presented in IEC 62648.

NOTE 2 This Technical Specification is based on and fully customizes IEC Guide 108.

### **2 Normative references**

There are no normative references in this document.
