## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents) and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 38, *Cloud computing and distributed platforms*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

## Introduction

Organizational autonomy and digital sovereignty are important, complex and evolving subject areas whose implications have expanded in recent years, as organizations of all types address the challenges inherent to supplying and procuring digital capabilities in evolving environments.

Government objectives and policies can often be addressed through public or private partnerships, as these governments increasingly rely on industry to help address these goals to increase their prosperity while maintaining an appropriate degree of control and independence.

Since the same issues of independence and freedom of action and choice also apply to organizations – including private, public sector and not-for-profit – it is possible that such organizations will need to consider their own independence to achieve their goals.

This document defines a framework for understanding and evaluating the implications of digital sovereignty requirements and restrictions on the organization. It describes how the organization can configure its digital platform to appropriately balance those requirements with its own need for organizational autonomy to achieve its goals. The framework may be used by the organization itself, or by the policy makers and regulators of a sovereign entity which desire to examine the consequences of proposed digital sovereignty requirements and restrictions on organizations and industries.

The audience of this document includes:

- a) Organizational leaders (e.g. Chief Information Officer, Chief Data Officer and Chief Compliance Officer), business or technical decision makers and digital platform architects who configure the organization's digital platform to ensure it has the right balance of digital autonomy to support and enable the goals of the organization to be achieved.
- b) Policy makers and regulators who wish to understand the impact of digital sovereignty and autonomy matters.

# Information technology — Cloud computing and distributed platforms — Framework and concepts for organizational autonomy and digital sovereignty

## 1 Scope

This document specifies concepts related to the intersection of digital sovereignty, organizational autonomy, and digital platform, and provides a framework enabling organizations to address these concepts.

This document is applicable to all organizations and policy makers involved in organizational autonomy and digital sovereignty in cloud services and distributed platforms.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
